Apparatus Norms
“I PUT ALL MY EMOTIONS INTO COMPETING”
Giorgia Villa

WWW.GYMNOVA.COM
Editorial

In its commitment to serve its partners and performers ever better at the international competition level, the International Federation of Gymnastics (FIG) is exceptionally pleased to introduce the new edition of the Apparatus Norms for gymnastics. This publication is based on the revision of the 2018 edition and has been in effect since 01.09.2019.

This document is the result of a team effort led by the members of the FIG Apparatus Commission in close cooperation with the concerned Technical Committees and the Anti-doping/Medical/Scientific Commissions, Mr. Ludwig Schweizer and Mr. Daniel Fesser, Director of the FIG Apparatus Testing Institute in Freiburg – GymLab (Germany) have managed this process.

The contents of this FIG Apparatus Manual offer a didactical approach, which allows the readers to learn about the particular functions of each apparatus and about the intricate process that surrounds certification and approval. This publication also serves as a source of official information for all National Federations and lays the foundation of the collaboration between the FIG and the apparatus manufacturers.

The concept of these regulations' layout makes it possible to update the specific data pertaining to each apparatus used in the various gymnastic disciplines. It allows the technicians, the organizers, and above all the apparatus manufacturers to be kept abreast immediately on the latest developments in this important area. The drafting of these norms has taken into consideration our Technical Regulations, Codes of Points and Media Regulations.

With this publication, the FIG is renewing its commitment to the absolute necessity of providing standards for the apparatus used in official events and to guaranteeing that consistent testing and certification procedures are provided by fully neutral institutes delivering certificates in due form. In this respect, the FIG is pleased to further contribute to the improvement of our gymnasts’ safety and to remain vigilant about fair play in competition.

We wish to thank everyone who has contributed to the publication of this document. The FIG wishes to all of them much success and a prosperous future at the service of the gymnasts and their managers.

With our compliments,

INTERNATIONAL FEDERATION OF GYMNASTICS

Morinari Watanabe
President

Nicolas Buompane
Secretary General

Ali Al-Hitmi
Apparatus Commission President
Bloom with your rhythm.

2. Purpose and Principles I/3
3. Validity of the Apparatus Norms I/4
4. Guarantee for quality I/4
The FIG is proud to present its Official Partners, who not only support the FIG financially and in kind, but understand Gymnastics and the importance of the FIG’s efforts to promote the development of all its disciplines.

Our Official Partners help to make our World Championships and the World Gymnastics a great success and constantly support our member Federations.

We thank them for their dedication and ask the World of Gymnastics to return the favour by supporting the companies that advance the spirit of Gymnastics.

1. Introduction / Layout

The present booklet has four parts.

PART I. is the general part and contains the aim of these Rules, the introduction, the layout and general principles.
Part I is aimed at all users.

PART II. contains the actual Apparatus Norms with drawings, measurements, description of functional properties and testing norms.
Part II is also aimed at all users.

PART III. contains the procedures for how to obtain FIG Certificates and Diplomas.
Part III is mainly oriented to the apparatus manufacturers.

PART IV. contains the detailed description of the testing procedures and is directed to the apparatus manufacturers and the FIG recognised Testing Institutes.

2. Purpose and Principles

- The purpose of these Apparatus Norms is first, to have equivalent apparatus at all competitions. It is essential for the competitors to have the same, optimal conditions for the preparations for competitions and at competitions all over the World. This is necessary for practical reasons, for competition fairness and comparison and for safety.

- All apparatus used at official FIG events; the Olympic Games and the World Games must have a valid FIG Certificate. This Certificate will be issued by the FIG, provided the apparatus has been tested successfully.

- The controlled certification by the FIG and the testing procedures guarantee, that the Apparatus Norms are respected. With the Diplomas issued by the FIG, a partnership between the FIG and the apparatus manufacturers is created.

- The choice of material and construction must be left to the manufacturers, to allow the apparatus to adapt to progress, development and new construction techniques. Therefore, the FIG only prescribes measurements, functional properties, norms for testing and testing procedures.

- The FIG recognises neutral Testing Institutes, which have to follow the testing procedures decided by the FIG to test the functional properties, the norms and measurements of the apparatus.

- The testing procedures must be constantly developed with the purpose to have meaningful testing procedures for all apparatus and further develop existing procedures. It is important to develop testing procedures which guarantee, that the apparatus fulfil the norms also after intensive use.

- To enforce the Apparatus Norms and to guarantee the quality of apparatus after intensive use, the FIG may, before, during or after an event, control the apparatus and make re-tests at the Testing Institute.

- In case of contradictions between the Apparatus Norms and the Code of Points, the Apparatus Norms prevail.
3. Validity of the Apparatus Norms FIG Certificate compulsory for all Apparatus

These Apparatus Norms were decided by the FIG Executive Committee and are valid from 1st September 2019.

They replace all previous editions as well as all previous decisions and publications regarding apparatus norms from the Executive Committee, Technical Committees and the Apparatus Commission of the FIG.

They are compulsory for all FIG events, as well as at the Olympic Games, World Games, Commonwealth Games, Asian Games, Pan-American Games, University Games and other multi-sport Games with International participation. At all those events, no apparatus which does not have a valid FIG Certificate may be used.

The FIG strongly recommends that at all other national and international events, organised independently by its member federations or unions, only apparatus which have a valid FIG Certificate may be used.

At international events, apparatus without a valid FIG Certificate may only be used provided all participating member federations have agreed in writing and bear the full responsibility and liability for the use of such uncertified apparatus. The FIG waives all responsibility in the cases where apparatus without a valid FIG Certificate are used.

4. Guarantee for quality

To guarantee equal quality and fairness for the competitors and to guarantee their safety and health, testing procedures for the quality of apparatus are necessary. Those testing procedures are defined in the Apparatus Norms part II and IV.

These apparatus norms as well as the requested norms and functional properties must not only be fulfilled at the time of the test at the Testing Institute. The apparatus manufacturers must guarantee to produce their apparatus in such a quality that the apparatus also fulfill the requested norms, functional properties and safety aspects after intensive use e.g. after a World Championship.
II Apparatus Norms
1. Overview of the apparatus of the FIG disciplines
   1.1 MAG  Men’s artistic gymnastics
   1.2 WAG  Women’s artistic gymnastics
   1.3 RG   Rhythmic gymnastics
   1.4 AER  Aerobic gymnastics
   1.5 TRA  Trampoline gymnastics
   1.6 ACR O Acrobatic gymnastics

2. Apparatus for the FIG disciplines, Construction and material description, dimensions
   2.1 MAG  Men’s artistic gymnastics
            MAG 1 Floor
            MAG 2 Pommel horse
            MAG 3 Rings
            MAG 4 Vaulting table
            MAG 5 Parallel bars
            MAG 6 Horizontal bar
            MAG 11 Landing mat 20 cm
            MAG 12 Landing mat 10 cm (Pommel horse)
            MAG 13 Supplementary mat 10 cm
            MAG 14 Vaulting Board
            MAG 15 Vaulting Board safety collar (Round off vaults)
            MAG 16 Mat for hands (Vault)
            MAG 18 Tension Control Sensor for Rings,
                     High Bars and Uneven Bars – TCS

   2.2 WAG  Women’s artistic gymnastics
            WAG 1 Vaulting table
            WAG 2 Uneven bars
            WAG 3 Balance beam
            WAG 4 Floor
            WAG 11 Landing mat 20cm
            WAG 13 Supplementary mat 10cm
            WAG 14 Vaulting Board
            WAG 15 Vaulting Board safety collar (Round off vaults)
            WAG 16 Mat for hands (Vault)
            WAG 17 Spotter Mat (Uneven Bars)

2. Apparatus of the FIG disciplines – Construction and material description, dimensions

2.1. MAG Men’s artistic gymnastics
Apparatus Supplier for the 48th FIG
Artistic Gymnastics World Championships Doha
Floor

Men's Artistic Gymnastics

Construction / Description of material, measurements

1. Form
   1.1. The Performance Area shall have a square format. The surface must be horizontal, even and without gaps. All plates of the under construction within the Performance Area shall have the same arrangement of elastic elements.
   1.2. All elements of the floor have to be connected firmly to prevent slipping.
   1.3. Border: Horizontal and even, at the same height as the Performance area
   1.4. Border’s variant: Width 50 cm, horizontal and even, at the same height as the Performance area, additional 50 cm inclination border, slope may not exceed 25 %.
   1.5. Safety zone: The safety zone shall be kept totally free as a surrounding zone around the performance area and the border. It shall be horizontal, even and without gaps.

2. Measurements
   2.1. Performance area    1200 cm x 1200 cm   Tolerance +/- 3 cm
   2.2. Diagonals of the performance area:  1697 cm +/- 5 cm
   2.3. Border     100 cm, min.
   2.4. Border as a variant
      2.4.1. Horizontal Area, Width     50 cm, min.
      2.4.2. Slope max. 25 %, Width     50 cm, min.
      2.4.3. Height of outer border at the very end   3,5 cm, max.
   2.5. When there is a delimitation strip between the Performance area and the border:
      2.5.1. Delimitation strip width     5 cm,   Tolerance +/- 0,5 cm
   2.6. The delimitation strip is part of the Performance area.

3. Functional Properties of the performance area and border
   3.1. Equal elasticity on the surface as well as dampening.
   3.2. When in use it should not have any hindering motion energy
   3.3. Elasticity and dampening must be balanced in such a way that they guarantee the gymnast stability and freedom of movement. It must not restrict turns and slide movements.
   3.4. The surface cover of the Performance area must provide a balance between anti-skid and slippage. It must not cause skin burns.
   3.5. The floor must not produce disturbing sound during the execution of an exercise. It must assure a low noise level.

4. Of plain colour which choice is left to the manufacturer’s discretion. Dark colours are not allowed.
   For certain events the FIG may stipulate the colours. The delimitation shall have a clear contrast to the performance area.

Norms / Functional properties: Regarding tests carried out by FIG Tests Institutes – please see chapter IV
surface de compétition, arena, Wettkampffläche
 cadre, edge, Umrandung

variantes, profile - variants, Schnit - Varianten A, B, C
Pommel Horse

Men’s Artistic Gymnastics

Construction / Description of material, measurements

1. Form
   1.1. The apparatus consists of a prismoid body which is placed horizontally onto a base. On the upper surface of the body, two pommels are attached crossways.
   1.2. The Horse Body:
      1.2.1. Its sides - viewed from the two length and two front sides - slant inward.
      1.2.2. In cross section the upper surface shows an arch, in length section, it is horizontal, and even, and without gaps, except for the points of attachments.
      1.2.3. All corners and edges are rounded.
      1.2.4. The profile of the pommel horse’s body shall lie within a ± 1 cm pipe at the top and a ± 0,5 cm pipe at the side (red lines) around the specifications (in green) in the draw. The profile of the pommel horse’s body shall not include any kinks at the transitions from one radius to another (see draw). The top of the horse’s body shall be curved uniformly convex and shall not be flat.
   1.3. The Pommels:
      1.3.1. They are circular in profile, rise from their bases and then make a slight circular transition to the horizontal.
      1.3.2. The base which serves as a support conforms to arched upper surface of the horse body.
   1.4. The Base:
      1.4.1. Forms and conception do not have any prescriptions. It must assure stability of the body and the horizontal position of its length and cross axis; all technical safety rules must be observed.

2. Measurements
   2.1. Body:
      2.1.1. Length at top 160 cm * 1 cm/1
      2.1.2. Length at bottom 155 cm * 1 cm/2
      2.1.3. Width at top 35 cm * 1 cm/1
      2.1.4. Width at bottom 30 cm * 1 cm/2
      2.1.5. Height 28 cm * 1 cm
      2.1.6. Height from upper surface to the floor: 115 cm * 1 cm
   2.2. Pommels:
      2.3. Inner vertical diameter ≥ 7 cm
      2.4. Width at base 31 cm * 0,5 cm
      2.5. Height 12 cm * 0,5 cm
      2.6. Profile diameter (at the nearly horizontal part) 3,4 cm * 0,1 cm
      2.7. Span of the nearly horizontal part 15 cm * 0,2 cm
   2.9. Distance between Pommels:
      2.9.1. Minimum ≤ 40 cm
      2.9.2. Maximum ≥ 45 cm

* refers to the tolerance, +/-.
/1 and /2 are measurements linked to each other. In case of variation, they must move in the same direction, e.g. if width at top is 355 mm, the width at the bottom must be 305 ±10 mm.

Adjustments:
Pommels: The distance between the two pommels, inside measurement, must be continuously adjustable from 40 cm to 45 cm
Pommel Horse

3. Functional Properties
   3.1. Body:
       3.1.1. Its support area must be elastic and absorbing.
       3.1.2. The side surfaces, as well as corners and edges must have a dampening effect.
       3.1.3. Indentations caused by support may not hinder turns of the palms.
       3.1.4. The tear proof cover material, which tightly covers the body, may not slip or wrinkle.
       3.1.5. The upper surface must offer the ability to glide, but not be slippery.
       3.1.6. The cover material must be moisture absorbing and not cause skin burns.
       3.1.7. The vertical and cross axis of the horse must be horizontal. During use, the horse must remain static.
   3.2. Pommels:
       3.2.1. In principle, they are made of stiff materials.
       3.2.2. A slight flexibility, which must not affect support stability, is provided by the padded upper surface of the body.
       3.2.3. The anchoring to the body must assure immobility.
       3.2.4. The upper surface is slip proof, but must allow the palms to turn and slide in support.
       3.2.5. The pommels must be moisture absorbent and neutral to the use of magnesia.
   3.3. Base:
       3.3.1. It must allow exact levelling of the body, and assure its immobility.
       3.3.2. Floor anchoring for stabilization purposes is permitted, as well as anti-skid, dampening floor covering.
       3.3.3. With exception of parts on the floor (feet) the base may not protrude from the body of the horse. The height of the feet must allow an even, horizontal mat covering.
       3.3.4. No parts of the base may show sharp corners or edges, nor rough surfaces.
       3.3.5. Since the body is attached to the base, the stability of the apparatus depends on it as well. This is also one of the most important requirements for safety.

4. Colours
   4.1. Are left to the manufacturers’ discretion. It is strongly recommended that the colour of the pommel horse's surface and the colour of the mats have sufficient contrast.
   4.2. For certain events the FIG may choose the colour.
   4.3. Based on practical tests and considered allowed are:
       4.3.1. For the body: The natural colour of leather, even when synthetic materials are used for the revetment
       4.3.2. For the pommel: Natural wood colour, or a light neutral shade, if synthetic materials are used
       4.3.3. For the base: Varnished colour

5. Mats
   5.1. The mats used for pommel horse must have a height of 10cm (MAG 11/12)

Norms / Functional properties: Regarding tests carried out by FIG Tests Institutes – please see chapter IV

Men's Artistic Gymnastics

Construction / Description of material, measurements

1. Form
   1.1. The apparatus consists of two circular rings, attached to cables suspended on a frame.
   1.2. The rings have a uniform, circular profile.
   1.3. The cables have a pivoting mechanism at their suspension point on the frame. In the still position, the cables must hang in the vertical.
   1.4. The frames consist of two supports and a horizontal beam which contains the attachment devices of the cables.
   1.5. The frame is held upright by four tension cables, anchored to the floor. (Max. Ø 1 cm)
   1.6. To distribute the pressure, the supports have widened floor plates.

2. Measurements
   2.1. Rings:
      2.1.1. Inner diameter 18 cm * 0,1 cm
      2.1.2. Diameter of profile 2,8 cm * 0,1 cm
      2.1.3. Pendulum length below suspension device:
      2.1.4. Distance from point of attachment to lower inner side of the rings 300 cm * 1 cm
      2.1.5. Distance of lower inner side of the rings to floor 280 cm * 0,5 cm
   2.2. Straps:
      2.2.1. Length 70 cm * 1 cm
      2.2.2. Width 4 cm * 1 cm
      2.2.3. Distance between the 2 points of attachment on the frame 50 cm * 0,5 cm
   2.3. Frame:
      2.3.1. Height of attachment point at horizontal beam to the floor 580 cm * 1 cm
      2.3.2. Inner Distance of supports on the floor 260 cm min
      2.3.3. At height of 320 cm (point of indentation) 280 cm min
      2.3.4. Length of horizontal beam 120 cm min
      2.3.5. Measured 30cm under the attachment point
   2.4. Distance of tension cables:
      2.4.1. in vertical direction of apparatus 550 cm * 5 cm
      2.4.2. in cross section to apparatus 400 cm * 5 cm

* Tolerance, +/-

3. Functional Properties
   3.1. The suspension device and the rings must be able to swing out freely in all directions. With the exception, of course, of the cable’s direction.
   3.2. Even submitted to tension, the rings must rotate easily. For this purpose, the pivoting device exists.
   3.3. Under load both rings shall have the same height above the ground.
   3.4. The rings must guarantee a sure grip and therefore must not be slippery.
   3.5. The rings must absorb moisture.
   3.6. The rings as such are made of a stiff material; in effect however, the apparatus must have a certain elasticity, to protect the gymnast’s joints. This is done partly through form and the method by which the frame is held, and can be helped by an elastic dampening device on the suspension cables.
   3.7. This device however may not produce springy or counter swings.
   3.8. Rings are either made of wood or synthetic material.
   3.9. Except for sanding, the rings' upper surfaces receive no other treatment. The material must remain natural in order to absorb magnesia and moisture so as to assure a sure grip.
   3.10. The pivoting mechanism, the elastic dampening device and the stepless height regulator are connected to the hanging points.
   3.11. The cables are protected by a smooth synthetic cover material
   3.12. The straps, to which the rings are attached, are made of leather or of a sturdy equivalent material.
   3.13. Aside from the required resistance of materials, the stability of the apparatus must be assured.
Rings

3.14. During the exercise, the frame and the suspension device must not move or cause hindering sways or vibrations.
3.15. The required elasticity of the suspension device must not produce springy or counter swings.
3.16. Sharp corners and edges and rough surfaces are to be avoided.
3.17. The ring cables and fixations must be such that no shortening of the ring cables and straps can occur during the exercises of the gymnasts.

4. Colour
4.1. The rings retain the natural colour of the material.

Norms / Functional properties: Regarding tests carried out by FIG Tests Institutes – please see chapter IV.

Notes:
- Construction: mandatory.
- Design: at your discretion.
- Drawing: typical example.
- Measurement: example.

Measurements:
- Diameter of ring profile: 2.8 cm.
- Diameter of ring: 18 cm.
- Height of ring: 70 cm.
- Distance from suspension: 50 cm.
- Distance from base: 320 cm.
- Distance from side view: 400 cm.
- Distance from front view: 550 cm.
Vaulting table

Men’s Artistic Gymnastics

Construction / Description of material, measurements

1. Form
1.1. The apparatus consists of a slightly inclined table body which is mounted onto a "monostand" bottom frame. The table body consists of a front surface (A) which, seen from the direction of the vault, is inclined to 8° to the vertical and merges into two arched bends (B1 and B2) and then into a linear cover surface (C) which is inclined 3° to the horizontal. The table body is divided into a bounce area (A) and a push away area (B and C) with a clear colour contrast. The different surfaces merge into each other without any gaps in between. The push away area is slightly rounded in transversal direction (D).
1.2. All corners and edges are rounded. The bottom frame must offer the table body a stable and secure supporting surface and must guarantee the abidance by the technical safety regulations. The bottom frame with cushioning may not present any parts that protrude from under the vaulting table’s body except on the landing side. As a collision protection dangerous metal parts of the support must be cushioned.
1.3. Recommendation: All levers and locking mechanisms should be incorporated into the under construction.
1.4. At the landing side the legs of the bottom frame must be cushioned at the same height level as the landing mat (20cm, Tolerance +10cm).
1.5. The vaulting table including the cushioning of the bottom frame must represent a “monostand” - construction.

2. Measurements

2.1. Table body:
2.1.1. length: 120 cm +/- 1 cm
2.1.2. width: 95 cm +/- 1 cm

2.2. Height at the given measurement point (see drawing) \(1\): 135 cm +/- 1 cm

2.3. Upper height at the bounce area (see drawing) \(1\): 122 cm +/- 1 cm

Remark: For competitions the vaulting table must be positioned on a rigid board which has the same height as the run-up area (see below)\(1\). In competitions the apparatus height must correspond to the top level of the run-up area.

2.4. Maximal orthogonal deviations from the given profile lines in longitudinal and transversal directions: < 1 cm

2.5. Protrusion of the leg construction below the table body on the landing side (only allowed with appropriate cut-outs in the landing mat): 15 cm maximal

2.6. Height of the leg frame 8 cm maximal

2.7. Circumference of the (cushioned) bottom frame including all levers and fixation devices between the height of 50 cm up to 85 cm 1828m minimal

2.8. Distance between the (cushioned) leg construction including all levers and fixation devices and the projection of the table body on all four sides between the height of 50 cm up to 85 cm 25 cm minimal

2.9. The adjusted height of the vaulting table must be clearly signed at the side. Additional Measurements see drawing. The profile lines towards A, B1, B2 and D are to be respected as indicated in the drawing. Maximum deviations < 1 cm – measured at a right angle to the profile line.

3. Functional properties
3.1. The push away area must be shock-absorbing so that shoulders and wrists are protected.
3.2. The rebound properties must be guaranteed to be as homogeneously as possible for all the possible impact points on the table body.
3.3. Extended time-shift for rebounding energy at the impact points caused by extreme deflections is not acceptable.
Vaulting table

3.4. The table body must be evenly cushioned over the entire push away area. The cover material must be non-slippery but not rough. It may not cause a burning sensation on sliding.
3.5. The bounce area must be cushioned with a high-quality material in order to provide a good collision protection.
3.6. Recommendation: Any protruding items covered by the cushioning of the stand should be avoided or sufficiently covered to prevent perforation through the cushioning during accidental impact.
3.7. In order to avoid swaying, vibrations and shifting, the apparatus must have a device for fastening it to the floor.

4. Colour
4.1. The colour of the surface material may be chosen according to taste. For certain events the colour may be determined by the FIG

5. Run-up area
5.1. The run-up area is composed of a run-up mat and a rigid board underneath the vaulting board.
5.2. The run-up mat shall be positioned so the carpet threads open in the opposite direction of the gymnast run, offering the greatest friction between the feet and run up mat. The orientation of the run-up mat shall be the same in the training halls, warm-up halls, and competition hall.
5.3. The start of the run-up (2500 cm) shall be marked by a block, attached at the start of the vault run-up mat length (measured from the vertical projection of the beginning of the vaulting table, see “reference point” in the drawing, to the inner side of the block):
   
   \[
   2500 + 10 \text{ cm}
   \]

   5.3.1. width (run-up mat) 100 +/- 1 cm
   5.3.2. width (rigid board underneath) 100 cm min
   5.3.3. height (same height for run-up mat and board underneath) max 2,5 cm
   5.3.4. length of the rigid board underneath the vaulting board 320 +/- 1 cm

5.4. The colour of the run-up area must have a clear contrast to the colour of the vaulting board. The whole run up area (run-up mat and the rigid board underneath) shall have the same colour

6. Authorized landing zone
6.1. Marking on the supplementary mat above the landing mat (see drawing).
   6.1.1. Width of the landing corridor at the table site: 95 cm
   6.1.2. Width of the landing corridor (end of 600 cm landing mat): 150 cm
   6.1.3. When the authorized landing zone is marked out by stripes: marking strip width on the supplementary mat: 5 cm +/- 0.5 cm
   The marking strip is part of the authorized landing zone.
   6.1.4. Additional marking strip width in the centre of the landing corridor (see drawing):
   5 cm +/- 0.5 cm

Remarks concerning the drawings:
• Bottom frame construction schematized.
• All dimensions in cm
• Tolerances for all dimensions: +/- 1 cm
• Maximal Orthogonal Deviations from the given profiles in longitudinal and transversal directions: < 1 cm
• Dimensions binding; Construction may be different – drawing as example.

Parallel Bars

Men’s Artistic Gymnastics

Construction / Description of material, measurements

1. Form
1.1. The apparatus consists of two bars of equal dimensions, which run parallel and at the same height.
1.2. The position of the bars is parallel; pre-stressing is allowed.
1.3. Each bar is supported by two upright supports, which stand on a stable base frame.
1.4. The uprights consist of a static and mobile part, that allow the height and width adjustment of the bars.
1.5. In cross section, bars present a drop like profile, which remains unchanged for their entire length.
1.6. The profile of the bars shall lie within a ± 0,5 mm pipe around the specifications in the draw. The profile of the bars shall not include any kinks at the transitions from one radius to another (see draw)

2. Measurements
2.1. Bars:
   2.1.1. Length 350 cm * 1 cm
   2.1.2. Vertical axis of profile 5 cm * 0.1 cm
   2.1.3. Horizontal axis of profile 4 cm * 0.1 cm
   2.1.4. Height of upper edge measured from the floor near to the supports 200 cm * 1 cm
   2.1.5. Distance between points of attachment 230 cm * 1 cm
   2.1.6. Distance between bars from 42 cm to 52 cm
   2.1.7. Distance between the columns at adjustment levels, min. 48 cm
   2.1.8. Heights of mats 20 cm * 1 cm

   * Tolerance +/-

   Width adjustment: continuous adjustment of the distance between bars from at least 42 cm to 52 cm must be possible

3. Functional properties
3.1. The bars must have elasticity.
3.2. To assure the efficiency of this elasticity the fixing points of the bars on the uprights must be articulated.
3.3. No significant swaying of bars in the longitudinal and transversal sense must occur.
3.4. The entire apparatus must be stable. Incident vertical and transversal forces must not move the apparatus.
3.5. The upper surface of the bars must be hygroscopic, and not be slippery.
3.6. The surface of the bars must be made of wood or of other material with similar behaviour. If it is made of wood, it shall be free of errors (knots, fissure, etc.). Except for sanding, it receives no other treatment.
3.7. The rails must be secured against breaking through.
3.8. The apparatus must not have sharp corners of edges or any protruding parts.
3.9. Rough surfaces are to be avoided.
3.10. The adjustment screws must be warranted against unintended adjustments.
3.11. The adjustment devices must be double locked to assure that they do not cede during use.
3.12. The base girders as well as the space between them must be covered by mats. They must be even and without gaps and of the same height as the surrounding mats, forming a uniform surface, from which only the uprights rise.

4. The rails retain the natural wood colour.

Norms / Functional properties: Regarding tests carried out by FIG Tests Institutes – please see chapter IV

Horizontal bar

Men's Artistic Gymnastics

Construction / Description of material, measurements

1. Form
1.1. The Horizontal bar consists of a round bar with a constant diameter, which is held horizontally by two supports.
1.2. The supports stand erect on the floor and have additional floor plates for displacing force.
1.3. They are held upright by tension cables (Ø max. 1 cm), connected to four floor anchors.

2. Measurements
2.1. Horizontal bar:
   2.1.1. Diameter        2.8 cm * 0.01 cm
   2.1.2. Length between attachment points   240 cm * 1 cm
   2.1.3. Distance between the sockets   min 200 cm * 1 cm
   2.1.4. Height of upper edge: measured from floor  280 cm * 1 cm
   2.1.5. The height of the horizontal bar must be adjustable for additional 10 cm to the standard height (280+10 cm * 1 cm).
   2.1.6. Height changes at competitions to 280+10 cm must be possible by devices at the supports above the upper surface of the landing mat (20 cm). Wires and chains shall be long enough to increment the height.
   2.1.7. Height increases of 10 cm shall be allowed in competitions for gymnasts who touch the mat with their feet during the exercise. This must be announced to the organizers at the time of the nominative entry and verified by the President or a member of the Superior Jury during the training.

   Equipment suppliers / Organizers must provide trained staff for a safe, fast and competent height increment if necessary.

   2.2. Distance of floor anchors:
   2.2.1. Lengthwise      550 cm * 5 cm
   2.2.2. Crosswise      400 cm * 5 cm

   * Tolerance +/-

3. Functional properties
3.1. The horizontal Bar must be elastic, and be secured against breaking through.
3.2. The elasticity is not just determined by the bar but also by the apparatus, acting as a whole. That is why the placement of the floor anchors, the supports and the tension cables, as well as the degree of tension must be strictly observed to insure uniform elasticity.
3.3. The bars attachment to the uprights must be articulated, to assure the effectiveness of its elasticity.
3.4. The bar must allow turn and glide movements without slipping.
3.5. The apparatus must be stable. The supports must not move or sway during use.
3.6. Neither the bar nor the tension cables should produce disturbing sounds during use.
3.7. Preferably such materials should be used which guarantee a slim form and should not block the view

4. Colours
4.1. The bar retains the colour of natural polished steel.
4.2. Colours or designs of the remaining parts are left to the discretion of the manufacturer. The FIG may designate the colour for specific events

Norms / Functional properties: Regarding tests carried out by FIG Tests Institutes – please see chapter IV
Horizontal bar

surface d'appui 550 x 1200
floor area for apparatus 550 x 1200
Gerätestellfläche 550 x 1200
Landing mats

Men’s Artistic Gymnastics

Construction / Description of material, measurements

1. Form
   1.1. Their upper surface must be horizontal, even and without gaps.
   1.2. Specially designed mats must be used to cover the basis of the apparatus evenly

2. Measurements
   2.1. Height of the landing mats (MAG 3, 4, 5, 6): 20 cm * 1 cm
   2.2. Height of the landing mats pommel horse (MAG 2): 10 cm * 1 cm

* Tolerance +/-
lengths and widths see drawing

3. Functional properties
   3.1. Absorbency:
      3.1.1. Mats must absorb motion energy in order to reduce the reaction transmitted to the body of the landing gymnast to a tolerable proportion.
      3.1.2. They must respond to increased penetration with an evenly increasing resistance.
   3.2. Stability and Freedom of Movement:
      3.2.1. Absorbency of the mats must be balanced in order to guarantee standing, walking stability and freedom of movement.
   3.3. Indentations caused by the incidence of compressive forces must not encase the body parts, thereby hindering freedom of movements. They may not be too deep or narrow.
   3.4. If a cover is used, such cover may not plaid and create hindering folds. The mats' upper surface material must offer a balance between anti-slip and slippage. It should be neither slippery nor possess inhibiting resistance.
   3.5. By no means should mats be dislocated during performances. An anti-skid cover on the mats' underside may provide this condition.
   3.6. The border zones of the mats which are pushed together should practically have the same functional properties as the remaining surface. Impacts on the border zones should not cause different indentations than on the remaining surface. For this purpose, and to bridge joints, continuous runners are permitted.

4. Colour
   4.1. Preference should be given to uniform colours.
   4.2. The upper surface must not show optically disturbing patterns or insignia.
   4.3. The FIG may designate the colour for certain events

Norms / Functional properties: Regarding tests carried out by FIG Tests Institutes – please see chapter IV

Supplementary mats

Men's Artistic Gymnastics

Construction / Description of material, measurements

1. Use
   1.1. The use of a supplementary mat is compulsory in competition for the athletes on the Vault (600 x 200 cm) and on Horizontal Bar (two, 400 x 200 cm).
   1.2. For training (in the training hall and during podium training) and in the warming up hall (correspondingly during the warming up session on the podium before the Apparatus Finals) an additional supplementary mat (200 x 200 cm) shall be available at the Floor, Rings, Vault and Horizontal Bar.

2. Form
   2.1. Their upper surface must be horizontal, even and without gaps.
   2.2. The supplementary mats have to be laid on the landing mats (MAG11). At the vault the supplementary mat (600 x 200 cm) shall be attached (i.e. using Velcro).

3. Measurements
   3.1. Height of the supplementary mats: 10 cm * 1 cm
   3.2. Vault (MAG4): 600 x 200 cm * 1 cm
   3.3. For the marking of the landing zone see MAG4.
   3.4. Horizontal bar (MAG6, at both sides): 400 x 200 cm * 1 cm
   3.5. Additional supplementary mat for training and warming up: Floor (MAG1), Rings (MAG3), Vault (MAG4), Horizontal bar (MAG6) 200 x 200 cm * 1 cm

   * Tolerance +/-

4. Functional properties
   4.1. The foam of the supplementary mats shall have a density of 25 kg / m$^3$ (+/- 2.5 kg /m$^3$). The ultimate tensile strength of the foam (ISO 1798: 2008) shall be ≥ 115 kPa, the compression stress value 40% shall be 4.0 (+/- 1.0) kPa (ISO 3386-1 – Amd1: 2010).
   4.2. By no means should mats be dislocated during performances. At the vault the supplementary mat (600 x 200 cm) shall be attached to the landing mat.

5. Colour
   5.1. Preference should be given to uniform colours.
   5.2. The upper surface must not show optically disturbing patterns or insignia.
   5.3. The FIG may designate the colour for certain events.
Vaulting board

Men's Artistic Gymnastics

- Vault (MAG4) – “hard” and “soft”
- Parallel bars (MAG5) – “soft”

Construction / Description of material, measurements

1. Form
   1.1. The profile of the vaulting board must adhere exactly to the respective blueprint.
   1.2. Its upper surface rises in an arched form, approaching the horizontal between 75 cm and 95 cm, measured from the frontal angle. The height reached at this point, may not be exceeded. After this point, the upper surface may continue horizontally or slope downward.
   1.3. The rise of the arch is 3.5 cm +/- 0.5 cm.
   1.4. For competitions a “soft” and a “hard” vaulting board shall be available. The “hard” board shall be marked with a dot on the surface.

2. Measurements
   2.1. Length       120 cm   * 1 cm
   2.2. Width           60 cm   * 1 cm
   2.3. Height           20 cm   * 1 cm
   2.4. Height (run-up side) max 3 cm
   2.5. Cushion Cover                      2 cm   * 0.5 cm
   2.6. Total height with cushion cover         22 cm   * 1.5 cm
   2.7. Free space between floor and the lower edge of the vaulting board at the run-up side max. 1 cm

*Tolerance +/-

2.8. The stipulated length and height refer to the vertical projection of the upper plate, i.e. the take-off plate.
2.9. The base may be larger, but cannot extend more than 2 cm beyond the projection of the board.
2.10. Labelling of the “hard” vaulting board on the surface by a dot with clear contrast on the longitudinal midline:
   2.10.1. Distance to the side of run up 5 cm
   2.10.2. Diameter                     8 cm

3. Functional properties
   3.1. The functional properties of the vaulting board (hardness, damping, elasticity) shall not be adjustable (i.e. springs must be fixed so that they cannot be easily removed by hand).
   3.2. The elasticity of the vaulting board must be most effective in the area between 75 cm and 95 cm, measured horizontally from the frontal angle.
   3.3. The vaulting-board must dampen the counter pressure, i.e. reduce motion energy. Elasticity and absorbency must be evenly distributed, so that the effect of the vaulting board differs only slightly, regardless whether the force of the impact is at the middle axis, or away from it.
   3.4. The upper surface of the vaulting board must offer slip resistance.
   3.5. The vaulting board must not produce disturbing sounds during its use.
   3.6. The board shall not slide at the time of impact of the athlete. This shall be achieved by anti-slip devices at the bottom side of the board or at the board underneath the vaulting board. The slip resistance shall be provided especially when the board bottoms out at the middle part.
   3.7. The vaulting board and its base may not have any sharp corners, edges and no protruding parts. Mainly the upper and under edge of the upper part of the Vaulting board towards the apparatus side (Vaulting Table, Balance Beam of Uneven Bars) shall be cushioned and rounded.
Vaulting board

4. Colour
   4.1. The choice of colour is left to the discretion of the manufacturer.
   4.2. With exception of the dot for “hard” vaulting boards optically disturbing patterns, stripes or insignia on the upper surface are not permitted.
   4.3. The FIG may designate the colour for certain events.

Norms / Functional properties: Regarding tests carried out by FIG Tests Institutes – please see chapter IV

Men's Artistic Gymnastics

Construction / Description of material, measurements

1. Use
   1.1. The usage of the safety collar around the vaulting board is compulsory for round-off entries at the vault. It is not allowed to place the safety collar on the foot of the vaulting table or underneath the vaulting table.

2. Form
   2.1. The safety collar is “u-shaped” and surrounds the vaulting board at the sides and the front toward the vaulting table. At the sides of the vaulting board its upper surface rises in an arched form in the same level as the vaulting board. At the front side of the vaulting board the surface of the safety collar is horizontal and even.
   2.2. The whole surface of the safety collar and the corresponding surface of the vaulting board need to be of the same height level.

3. Measurements
   3.1. Overall length: 120 cm (±20 cm)
   3.2. Minimal width at the side of the vaulting board: 20 cm
   3.3. Length at the front part of the vaulting board: 20 cm (± 0,5 cm)
   3.4. Maximal Difference between the height of the safety collars’ and the boards’ surface (respecting the arched form): ±1 cm
   3.5. Maximal gap between the safety collar and the vaulting board on all three sides: 0,5 cm

4. Functional Properties
   4.1. The safety collar has to provide a safe area around the vaulting board in case of an athlete misses the board for a take-off towards the vaulting table, therefore the safety collar must provide sufficient stability and cushioning at the whole upper surface. The bottom side shall have an “anti-slip” surface (i.e. Velcro) to prevent the safety collar from slipping away.
   4.2. The safety collar shall not hinder the vaulting board in its functional properties neither by restricting the airflow during the compression of the vaulting board nor hindering the movement of the upper parts during foot contact.

5. Colour
   5.1. The upper surface must not show optically disturbing patterns or insignia.
   5.2. The colour must be uniform and in contrast to the vaulting board.
   5.3. The FIG may designate the colour for certain events.
Mat for Hands (Vault)

Men’s Artistic Gymnastics

Construction / Description of material, measurements

1. Use
   1.1. A mat for hands can be used by the athletes for round-off entries on the vault

2. Form
   2.1. The upper surface must be horizontal and even. The mat for hands can be laid on the run-up area to cushion the hand contact during round-off entries onto the vaulting board.

3. Measurements
   3.1. Length in direction of the run-up: 120 cm * +10 cm
   3.2. Width: 100 cm * ±1 cm
   3.3. Height of the mat for hands: 3 cm *±0,5 cm

   * Tolerance

4. Functional Properties
   4.1. The cover material must be non-slippery but not rough. It may not cause a burning sensation. If a cover is used, such cover may not be bulged and create hindering folds.
   4.2. The bottom side shall have an “anti-slip” surface (i.e. Velcro) to prevent the mat for hands from slipping away.

5. Colour
   5.1. The upper surface must not show optically disturbing patterns or insignia.
   5.2. The colour must be uniform and in contrast to the run-up area.
   5.3. The FIG may designate the colour for certain events.
Men's Artistic Gymnastics

Construction / Description of material, measurements

1. Use
   1.1. Helping device for the adjustment of an individual tension at the cables of the Rings, the High Bars and the Uneven Bars in MAG / WAG competitions.
   1.2. The use is not mandatory for FIG competitions, but highly recommended to protect the athletes from an unexpected breakdown of the gymnastics equipment due to too low cable tension or by damaging parts of the apparatus especially the ground anchors due to too high cable tension. Furthermore, the use serves the coaches and athletes to set the same individual tension on the cables in the training halls, the warming up hall and the competition hall. For the last aspect, the use of TCS makes sense only if devices are provided at all Rings, High Bars and Uneven Bars in the training halls, the warm-up hall and the field of play for the competition in question.

2. Requirements
   2.1. The device must be able to measure and digitally display the tension at the cables in Newtons with 100 N increments. The TCS should be applicable to the tensioning of all FIG approved Rings, High bars and Uneven Bars and shall be implemented at the chains (or cables). If used, Tension Control Sensors should be installed at all of these apparatuses in the training halls, the warmup hall and the competition site.
   2.2. A visible warning lamp will avoid dangerous cable adjustments by overload or underload in the tension of the equipment.
   2.3. With TCS athletes and coaches should have the possibility to adjust the same individual tension at the cables for the training, warming-up and competition apparatuses.
   2.4. A TCS shall be easy adjustable between chain or wires by shackles at all FIG approved equipment.

3. General Functions
   3.1. The TCS shall contain a clearly legible, digital display showing the tensile force between the attachment points in Newtons at 100 N increments.\(^1\)
   The unit Newton must be indicated by the letter "N".
   3.2. The digital display of the tensioning force and a clear visible warning light (if over- or underload occurs; see 3) shall only appear for a measurement time interval between 10 and 15 seconds after pressing an easily accessible START- button.
   3.3. The warning lamp shall light up during the measurement time interval if there is an over- or underload. This is the case for a tension of \(x > 5000\)N and \(x < 1000\)N.
   3.4. The mass of a TCS including its shackles shall be lower than 0,9 kg.
   3.5. The effective inner length between the two shackles as attachment between the chains or cables shall not exceed 0.18m.
   3.6. The measurement range shall be 0 – 10000N (displayed until 5000N in steps of 100N).
   3.7. The strength of a TCS including shackles shall be \(x > 15000\) N.
   3.8. A TCS shall have no wired power supply. Only batteries or load cells with enough capacity (> 5 * 24h) and with easy charging are allowed.
   3.9. A suitable charger must be included with the TCS. If this is not the case, standard connections (e.g. USB, Micro-USB, USB Type C etc.) shall be used and a clear message shall be sent to the customer when purchasing a TCS that he himself has to take care of the charger, power bank or similar.
   3.10. The TCS shall come with an English written documentation containing a user’s guide and all necessary technical descriptions (including installation procedures). Furthermore, this documentation shall contain the following recommendation for mounting of a TCS:

---

\(^1\) Additional remark:
The one and ten digits, which are always 0 due to the rounding, do not have to be displayed variably but can be fixed on the housing. The combined reading of the variable display and the firmly imprinted digits shall result in Newton values.
4. Recommendations for mounting of TCS
   4.1. In general, only one single TCS on one of the four tension cable sides of the gymnastic apparatus is enough. However, two TCSs are required for special asymmetrical constructions of the Uneven Bars.
   4.2. A TCS should be installed at a cable where the desired tension for the gymnastic apparatus can be adjusted. In addition, the TCS must always be installed towards the head judge of the gymnastic apparatus.
   4.3. When measuring with TCS at the Uneven Bars, it is particularly important that all equipment in the training halls, the warm-up hall and the competition hall is set up with exactly the same distances between the ground anchors and the equipment stands, as otherwise different measured values may occur with the same functional property of the gymnastic equipment.
   4.4. A sufficient battery charge must be ensured for the entire duration of the competitions. In addition to a full charge at the beginning, this must be done during longer competitions by charging with the corresponding chargers during the periods of no use (e.g. overnight. If chargers or Powerbanks are not included in the scope of delivery, the user must ensure that they are available in sufficient numbers.
   4.5. If the use of TCS is planned, it is advisable to contact the manufacturer of the gymnastics equipment in good time in order to ensure that the additional length by the TCS will not cause any problems with the cables and chains. If necessary certain suitable accessories need to be ordered from the supplier(s).
The Best Quality for Your Best Performance

Senoh’s Gymnastics Expertise is cultivated from its history since 1948 and we are one of the long standing companies approved by FIG.
2.2. WAG Women’s artistic gymnastics
Vaulting Table

Women’s Artistic Gymnastics

Construction / Description of material, measurements

1. Form
   1.1. The apparatus consists of a slightly inclined table body which is mounted onto a "monostand" bottom frame. The table body consists of a front surface (A) which, seen from the direction of the vault, is inclined to 8° to the vertical and merges into two arched bends (B1 and B2) and then into a linear cover surface (C) which is inclined 3° to the horizontal. The table body is divided into a bounce area (A) and a push away area (B and C) with a clear colour contrast. The different surfaces merge into each other without any gaps in between. The push away area is slightly rounded in transversal direction (D).
   1.2. All corners and edges are rounded. The bottom frame must offer the table body a stable and secure supporting surface and must guarantee the abidance by the technical safety regulations. The bottom frame with cushioning may not present any parts that protrude from under the vaulting table’s body except on the landing side. As a collision protection dangerous metal parts of the support must be cushioned.
   1.3. Recommendation: All levers and locking mechanisms should be incorporated into the under construction.
   1.4. At the landing side the legs of the bottom frame must be cushioned at the same height level as the landing mat (20cm, Tolerance +10cm).
   1.5. The vaulting table including the cushioning of the bottom frame must represent a "monostand" - construction.

2. Measurements
   2.1. Table body:
      2.1.1. length: 120 cm +/- 1 cm
      2.1.2. width: 95 cm +/- 1 cm
   2.2. Height at the given measurement point (see drawing) 1: 135 cm +/- 1 cm
   2.3. Upper height at the bounce area (see drawing) 1: 122 cm +/- 1 cm

   Remark: For competitions the vaulting table must be positioned on a rigid board which has the same height as the run-up area (see below)
   1 : In competitions the apparatus height must correspond to the top level of the run up area.

   2.4. Maximal orthogonal deviations from the given profile lines in longitudinal and transversal directions: < 1 cm

   2.5. Protrusion of the leg construction below the table body on the landing side (only allowed with appropriate cut-outs in the landing mat): 15 cm maximal

   2.6. Height of the leg frame 8 cm maximal

   2.7. Circumference of the (cushioned) bottom frame including all levers and fixation devices between the height of 50 cm up to 85 cm 1828m minimal

   2.8. Distance between the (cushioned) leg construction including all levers and fixation devices and the projection of the table body on all four sides between the height of 50 cm up to 85 cm 25 cm minimal

   2.9. The adjusted height of the vaulting table must be clearly signed at the side. Additional Measurements see drawing. The profile lines towards A, B1, B2 and D are to be respected as indicated in the drawing. Maximum deviations < 1 cm – measured at a right angle to the profile line.

3. Functional properties
   3.1. The push away area must be shock-absorbing so that shoulders and wrists are protected.
Vaulting Table

3.2. The rebound properties must be guaranteed to be as homogeneously as possible for all the possible impact points on the table body.
3.3. Extended time-shift for rebounding energy at the impact points caused by extreme deflections is not acceptable.
3.4. The table body must be evenly cushioned over the entire push away area. The cover material must be non-slippery but not rough. It may not cause a burning sensation on sliding.
3.5. The bounce area must be cushioned with a high-quality material in order to provide a good collision protection.
3.6. Recommendation: Any protruding items covered by the cushioning of the stand should be avoided or sufficiently covered to prevent perforation through the cushioning during accidental impact.
3.7. In order to avoid swaying, vibrations and shifting, the apparatus must have a device for fastening it to the floor.

4. Colour
4.1. The colour of the surface material may be chosen according to taste. For certain events the colour may be determined by the FIG

5. Run-up area
5.1. The run-up area is composed of a run-up mat and a rigid board underneath the vaulting board.
5.2. The run-up mat shall be positioned so the carpet threads open in the opposite direction of the gymnast run, offering the greatest friction between the feet and run up mat. The orientation of the run-up mat shall be the same in the training halls, warm-up halls, and competition hall.
5.3. The start of the run-up (2500 cm) shall be marked by a block, attached at the start of the vault run-up mat length (measured from the vertical projection of the beginning of the vaulting table, see “reference point” in the drawing, to the inner side of the block):

<table>
<thead>
<tr>
<th>Dimension</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.3.1. width (run-up mat)</td>
<td>100 +/- 1 cm</td>
</tr>
<tr>
<td>5.3.2. width (rigid board underneath)</td>
<td>100 cm min</td>
</tr>
<tr>
<td>5.3.3. height (same height for run-up mat and board underneath)</td>
<td>max 2,5 cm</td>
</tr>
<tr>
<td>5.3.4. length of the rigid board underneath the vaulting board</td>
<td>320 +/- 1 cm</td>
</tr>
</tbody>
</table>

5.4. The colour of the run-up area must have a clear contrast to the colour of the vaulting board. The whole run up area (run-up mat and the rigid board underneath) shall have the same colour

6. Authorized landing zone
6.1. Marking on the supplementary mat above the landing mat (see drawing).

<table>
<thead>
<tr>
<th>Dimension</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>6.1.1. Width of the landing corridor at the table site:</td>
<td>95 cm</td>
</tr>
<tr>
<td>6.1.2. Width of the landing corridor (end of 600 cm landing mat):</td>
<td>150 cm</td>
</tr>
<tr>
<td>6.1.3. When the authorized landing zone is marked out by stripes: marking strip width on the supplementary mat:</td>
<td>5 cm +/- 0.5 cm</td>
</tr>
</tbody>
</table>

The marking strip is part of the authorized landing zone.
6.1.4. Additional marking strip width in the centre of the landing corridor (see drawing): | 5 cm +/- 0.5 cm |

Remarks concerning the drawings:
- Bottom frame construction schematized.
- All dimensions in cm
- Tolerances for all dimensions: +/- 1 cm
- Maximal Orthogonal Deviations from the given profiles in longitudinal and transversal directions: < 1 cm
- Dimensions binding; Construction may be different– drawing as example.

Norms / Functional properties: Regarding tests carried out by FIG Tests Institutes – please see chapter IV

Uneven Bars

Women’s Artistic Gymnastics

Construction / Description of material, measurements

1. Form
   1.1. The apparatus consists of two bars with circular profile, running parallel, but at different heights. The bars are carried by a support base.
   1.2. The support base has four uprights, which are held by tension cables(Ø max 1 cm) anchored to the floor.
   1.3. Each bar is carried by 2 supports.
   1.4. One low and one high support are connected to a floor device and a width adjustment device.

2. Measurements
   2.1. Bars:
      2.1.1. Diameter 4,0 cm 3,92 ≤ x ≤ 4,04 cm
      2.1.2. Length 240 cm * 1,0 cm
      2.1.3. Distance between the sockets min 200 cm * 1,0 cm
   2.2. Height of the upper edge of the bars in inner diagonal position 180 cm:
      2.2.1. upper bar (to the floor) 250 cm * 1,0 cm
      2.2.2. lower bar (to the floor) 170 cm * 1,0 cm
      2.2.3. Inner diagonal distance (see drawing) between the 2 bars adjustable from min 130 - 180 cm max * 1,0 cm
      2.2.4. The diagonal distance must be adjustable continuously or with increments of max 2 cm.
      2.2.5. The diagonal distance (expressed in cm) must be shown on a scale at the distance adjustment device.
      2.2.6. The height of the bars must be adjustable for additional 10 cm to the standard height (lower bar: 170+10 cm; upper bar: 250+10 cm * 1 cm). At the increased height the inner diagonal distance between the bars shall be not more than 182 max* 1,0 cm
      2.2.7. Height increases of 10 cm shall be allowed in competitions for gymnasts who touch the mat with their feet during the exercise. This must be announced to the organizers at the time of the nominative entry and verified by the President or a member of the Superior Jury during the training.
      2.2.8. Equipment suppliers / Organizers must provide trained staff for a safe, fast and competent height increment if necessary.
      2.2.9. Transition periods for different technical solutions and maximal inner diagonal distances between the bars for 10 cm height increase to the standard height, upon request of taller athletes only:

<table>
<thead>
<tr>
<th>Transition Period</th>
<th>10 cm Height Adoption by</th>
<th>Maximal inner diagonal Distance between Bars (cm)</th>
</tr>
</thead>
<tbody>
<tr>
<td>From 2017-01-01 to 2019-12-31</td>
<td>a) 10 cm Blocks underneath the base <em>)</em></td>
<td>182 ± 1</td>
</tr>
<tr>
<td></td>
<td>b) 10 cm height increase at the stands <em>)</em></td>
<td></td>
</tr>
<tr>
<td>From 2020-01-01</td>
<td>10 cm height increase at the stands <em>)</em></td>
<td>182 ± 1</td>
</tr>
</tbody>
</table>

*)* : provided that this technical solution is homologated by passed FIG standardization tests.

2.3. Distance of floor anchors:
   2.3.1.lengthwise        550 cm * 5 cm
   2.3.2.crosswise          400 cm * 5 cm

3. Functional properties
   3.1. Both bars must have the same, uniform elasticity. To assure this, their supports must be articulated.
   3.2. The bar surface must provide a good glide and turn capability but may not be slippery.
   3.3. To ensure grip stability, the bars’ surface must absorb moisture.
Uneven Bars

3.4. The bars must be secured (reinforced) against breaking through.
3.5. A safeguard system must prevent an unintended release of the movable components of the apparatus.
3.6. When the apparatus is used for performances, no hindering sways or vibrations and counter swings should occur.

4. Colour
4.1. The bars retain the natural colour of wood. They are neither lacquered, nor polished.

**Norms / Functional properties:** Regarding tests carried out by FIG Tests Institutes – please see chapter IV

Balance Beam

Women’s Artistic Gymnastics

Construction / Description of material, measurements

1. Form
   1.1. The apparatus consists of a beam, which is held by a base consisting of 2 supports.
   1.2. Lengthwise, the beam shall be straight and its upper surface and axis shall be even and horizontal.
   1.3. Viewed in cross section, the sides of the beam are arched.
   1.4. The base design is not prescribed. However, its legs may not protrude beyond the projection of the beam in its longitudinal direction. The supports of the beam must be cushioned. The cushioned parts shall not protrude the vertical projection of the beam.
   1.5. The front parts of the beam must be cushioned by rounded, damping padding. The padding must reach the top edge of the beam, but the radius of the rounding must begin immediately at the end of the beam to guarantee that the padding does not prolong the total length of the beam (examples see drawing)

2. Measurements
   2.1. Beam:
      2.1.1. Length 500 cm * 1 cm
      2.1.2. Cross section:
         2.1.2.1. Upper surface 10 cm * 0,5 cm
         2.1.2.2. Horizontal axis 13 cm * 0,5 cm
         2.1.2.3. Vertical axis 16 cm * 0,5 cm
         2.1.2.4. Bottom surface 10 cm * 0,5 cm
      2.1.3. Height of upper surface measured from the floor 125 cm * 1 cm
   2.2. Legs of base:
      2.2.1. Distance max. 500 cm
      2.2.2. Width max. 125 cm
   2.3. Cushioning of the supports:
      2.3.1. Thickness min. 15 mm
      2.3.2. Width of the supports incl. cushioning max. 13 cm
   2.4. Cushioning of the front parts of the beam:
      2.4.1. Thickness min. 15 mm up to max. 30 mm
   2.5. The Beam might have a height adjustment. It can be continuous or in 5 cm increments. However, the prescribed height of 125 cm * 1cm shall be observed at competition site.
   2.6. Continuous height adjustment is recommended for levelling purposes.

3. Functional properties
   3.1. The surface must have impact absorbent characteristics to protect the gymnast’s joints and limbs. It should also have elasticity to support the jumps.
   3.2. One of the most important properties of the beam is that it must be step safe. Elasticity must be equally distributed and must not disturb a sure step.
   3.3. The upper surface material of the beam must permit effortless gliding and turning, but not be slippery.
   3.4. The front parts of the beam must be padded.
   3.5. The cover material must not produce skin burns.
   3.6. The upper edge of the padding at the front parts of the beam shall not be harder than the surface of the beam.
   3.7. All protruding parts, especially screws underneath the balance beam shall be cushioned or hidden.
   3.8. During an exercise, the beam may not move, topple or sway

4. Colour
   4.1. The colour of the beam must distinctly differ from the colour of the mats.

Norms / Functional properties: Regarding tests carried out by FIG Tests Institutes – please see chapter IV
Women’s Artistic Gymnastics

Construction / Description of material, measurements

1. Form
   1.1. The Performance Area shall have a square format. The surface must be horizontal, even and without gaps. All plates of the under construction within the Performance Area shall have the same arrangement of elastic elements.
   1.2. All elements of the floor have to be connected firmly to prevent slipping.
   1.3. Border: Horizontal and even, at the same height as the Performance area
   1.4. Border’s variant: Width 50 cm, horizontal and even, at the same height as the Performance area, additional 50 cm inclination border, slope may not exceed 25 %.
   1.5. Safety zone: The safety zone shall be kept totally free as a surrounding zone around the performance area and the border. It shall be horizontal, even and without gaps.

2. Measurements
   2.1. Performance area 1200 cm x 1200 cm Tolerance +/- 3 cm
   2.2. Diagonals of the performance area: 1697 cm +/- 5 cm
   2.3. Border 100 cm, min.
   2.4. Border as a variant
   2.4.1. Horizontal Area, Width 50 cm, min.
   2.4.2. Slope max. 25 %, Width 50 cm, min.
   2.4.3. Height of outer border at the very end 3,5 cm, max.
   2.5. When there is a delimitation strip between the Performance area and the border:
   2.5.1. Delimitation strip width 5 cm, Tolerance +/- 0,5 cm
   2.6. The delimitation strip is part of the Performance area.

3. Functional Properties of the performance area and border
   3.1. Equal elasticity on the surface as well as dampening.
   3.2. When in use it should not have any hindering motion energy
   3.3. Elasticity and dampening must be balanced in such a way that they guarantee the gymnast stability and freedom of movement. It must not restrict turns and slide movements.
   3.4. The surface cover of the Performance area must provide a balance between anti-skid and slippage. It must not cause skin burns.
   3.5. The floor must not produce disturbing sound during the execution of an exercise. It must assure a low noise level.

4. Of plain colour which choice is left to the manufacturer’s discretion. Dark colours are not allowed. For certain events the FIG may stipulate the colours. The delimitation shall have a clear contrast to the performance area.

Norms / Functional properties: Regarding tests carried out by FIG Tests Institutes – please see chapter IV

Construction / Description of material, measurements

1. Form
   1.1. Their upper surface must be horizontal, even and without gaps.
   1.2. Specially designed mats must be used to cover the basis of the apparatus evenly.

2. Measurements
   2.1. Height of the landing mats (WAG 1, WAG2 and WAG3): 20 cm * 1 cm

   * Tolerance +/-

   lengths and widths see drawing

3. Functional properties
   3.1. Absorbency:
      3.1.1. Mats must absorb motion energy in order to reduce the reaction transmitted to the body
              of the landing gymnast to a tolerable proportion.
      3.1.2. They must respond to increased penetration with an evenly increasing resistance.
   3.2. Stability and Freedom of Movement:
      3.2.1. Absorbency of the mats must be balanced in order to guarantee standing, walking
              stability and freedom of movement.
   3.3. Indentations caused by the incidence of compressive forces must not encase the body parts,
              thereby hindering freedom of movements. They may not be too deep or narrow.
   3.4. If a cover is used, such cover may not plaid and create hindering folds. The mats' upper
        surface material must offer a balance between anti-slip and slippage. It should be neither
        slippery nor possess inhibiting resistance.
   3.5. By no means should mats be dislocated during performances. An anti-skid cover on the
        mats' underside may provide this condition.
   3.6. The border zones of the mats which are pushed together should practically have the same
        functional properties as the remaining surface. Impacts on the border zones should not
        cause different indentations than on the remaining surface. For this purpose, and to bridge
        joints, continuous runners are permitted.

4. Colour
   4.1. Preference should be given to uniform colours.
   4.2. The upper surface must not show optically disturbing patterns or insignia.
   4.3. The FIG may designate the colour for certain events

Norms / Functional properties: Regarding tests carried out by FIG Tests Institutes – please
see chapter IV

Warming up in Apparatus Finals on Podium
Supplementary Mats

Women’s Artistic Gymnastics

Construction / Description of material, measurements

1. Form
   1.1. The usage is compulsory in competition for the athletes at Uneven Bars, Balance Beam (400 x 200 cm) and at the vault (600 x 200 cm).
   1.2. For training (in the training hall and during podium training) and in the warming up hall (correspondingly during the warming up session on the podium before the Apparatus Finals) an additional supplementary mat (200 x 200 cm) shall be available at the Vault, Balance Beam and Floor

2. Form
   2.1. Their upper surface must be horizontal, even and without gaps.
   2.2. The supplementary mats have to be laid on the landing mats (WAG11). At the vault the supplementary mat (600 x 200 cm) shall be attached (i.e. using Velcro)

3. Height of the supplementary mats:
   3.1. Vault (WAG1): 600 x 200 cm * 1 cm
   3.2. For the marking of the landing zone see WAG1.
   3.3. Uneven Bars, Balance Beam (WAG2, WAG 3): 400 x 200 cm * 1 cm
   3.4. Additional supplementary mat for training and warming up:
   3.5. Vault (MAG4), Balance beam (WAG3), Floor (WAG4), 200 x 200 cm * 1 cm

   * Tolerance +/-

4. Functional properties
   4.1. The foam of the supplementary mats shall have a density of 25 kg / m³ (+/- 2.5 kg /m³). The ultimate tensile strength of the foam (ISO 1798: 2008) shall be ≥ 115 kPa, the compression stress value 40% shall be 4.0 (+/- 1.0) kPa (ISO 3386-1 – Amd1: 2010)
   4.2. By no means should mats be dislocated during performances. At the vault the supplementary mat (600 x 200 cm) shall be attached to the landing mat
   4.3. Preference should be given to uniform colours.
   4.4. The upper surface must not show optically disturbing patterns or insignia.

5. Colour
   5.1. The FIG may designate the colour for certain event.
Vaulting Board

Women's Artistic Gymnastics

- Vault (WAG1) – “hard” and “soft”
- Uneven bars (WAG2) – “soft”
- Balance beam (WAG3) – “soft”

Construction / Description of material, measurements

1. Form
   1.1. The profile of the vaulting board must adhere exactly to the respective blue print.
   1.2. Its upper surface rises in an arched form, approaching the horizontal between 75 cm and 95 cm, measured from the frontal angle. The height reached at this point, may not be exceeded. After this point, the upper surface may continue horizontally or slope downward.
   1.3. The rise of the arch is 3.5 cm +/- 0,5 cm.
   1.4. For competitions a “soft” and a “hard” vaulting board shall be available. The “hard” board shall be marked with a dot on the surface.

2. Measurements
   2.1. Length       120 cm   * 1 cm
   2.2. Width           60 cm   * 1 cm
   2.3. Height           20 cm   * 1 cm
   2.4. Height (run-up side) max 3 cm
   2.5. Cushion Cover                      2 cm   * 0,5 cm
   2.6. Total height with cushion cover         22 cm   * 1,5 cm
   2.7. Free space between floor and the lower edge of the vaulting board at the run-up side max. 1 cm

*Tolerance +/-

2.8. The stipulated length and height refer to the vertical projection of the upper plate, i.e. the take-off plate.
2.9. The base may be larger, but cannot extend more than 2 cm beyond the projection of the board.
2.10. Labelling of the “hard” vaulting board on the surface by a dot with clear contrast on the longitudinal midline:
   2.10.1. Distance to the side of run up 5 cm
   2.10.2. Diameter 8 cm

3. Functional properties
   3.1. The functional properties of the vaulting board (hardness, damping, elasticity) shall not be adjustable (i.e. springs must be fixed so that they cannot be easily removed by hand).
   3.2. The elasticity of the vaulting board must be most effective in the area between 75 cm and 95 cm, measured horizontally from the frontal angle.
   3.3. The vaulting-board must dampen the counter pressure, i.e. reduce motion energy. Elasticity and absorbency must be evenly distributed, so that the effect of the vaulting board differs only slightly, regardless whether the force of the impact is at the middle axis, or away from it.
   3.4. The upper surface of the vaulting board must offer slip resistance.
   3.5. The vaulting board must not produce disturbing sounds during its use.
   3.6. The board shall not slide at the time of impact of the athlete. This shall be achieved by anti-slip devices at the bottom side of the board or at the board underneath the vaulting board. The slip resistance shall be provided especially when the board bottoms out at the middle part.
   3.7. The vaulting board and its base may not have any sharp corners, edges and no protruding parts. Mainly the upper and under edge of the upper part of the Vaulting board towards the apparatus side (Vaulting Table, Balance Beam of Uneven Bars) shall be cushioned and rounded.
Vaulting Board

4. Colour
   4.1. The choice of colour is left to the discretion of the manufacturer.
   4.2. With exception of the dot for “hard” vaulting boards optically disturbing patterns, stripes or insignia on the upper surface are not permitted.
   4.3. The FIG may designate the colour for certain events.

Norms / Functional properties: Regarding tests carried out by FIG Tests Institutes – please see chapter IV

Vaulting Board safety collar (Round off vaults)

Women’s Artistic Gymnastics

Construction / Description of material, measurements

1. Use
   1.1. The usage of the safety collar around the vaulting board is compulsory for round-off entries at the vault. It is not allowed to place the safety collar on the foot of the vaulting table or underneath the vaulting table.

2. Form
   2.1. The safety collar is “u-shaped” and surrounds the vaulting board at the sides and the front toward the vaulting table. At the sides of the vaulting board its upper surface rises in an arched form in the same level as the vaulting board. At the front side of the vaulting board the surface of the safety collar is horizontal and even.
   2.2. The whole surface of the safety collar and the corresponding surface of the vaulting board need to be of the same height level.

3. Measurements
   3.1. Overall length: 120 cm (±20 cm)
   3.2. Minimal width at the side of the vaulting board: 20 cm
   3.3. Length at the front part of the vaulting board: 20 cm (± 0,5 cm)
   3.4. Maximal Difference between the height of the safety collars’ and the boards’ surface (respecting the arched form): ±1 cm
   3.5. Maximal gap between the safety collar and the vaulting board on all three sides: 0,5 cm

4. Functional Properties
   4.1. The safety collar has to provide a safe area around the vaulting board in case of an athlete misses the board for a take-off towards the vaulting table, therefore the safety collar must provide sufficient stability and cushioning at the whole upper surface. The bottom side shall have an “anti-slip” surface (i.e. Velcro) to prevent the safety collar from slipping away.
   4.2. The safety collar shall not hinder the vaulting board in its functional properties neither by restricting the airflow during the compression of the vaulting board nor hindering the movement of the upper parts during foot contact.

5. Colour
   5.1. The upper surface must not show optically disturbing patterns or insignia.
   5.2. The colour must be uniform and in contrast to the vaulting board.
   5.3. The FIG may designate the colour for certain events.
Mat for Hands (Vault)

Women’s Artistic Gymnastics

Construction / Description of material, measurements

1. Use
   1.1. A mat for hands can be used by the athletes for round-off entries on the vault

2. Form
   2.1. The upper surface must be horizontal and even. The mat for hands can be laid on the run-up area to cushion the hand contact during round-off entries onto the vaulting board.

3. Measurements
   3.1. Length in direction of the run-up: 120 cm * +10 cm
   3.2. Width: 100 cm * ±1 cm
   3.3. Height of the mat for hands: 3 cm *±0,5 cm

   * Tolerance

4. Functional Properties
   4.1. The cover material must be non-slippery but not rough. It may not cause a burning sensation. If a cover is used, such cover may not be bulged and create hindering folds.
   4.2. The bottom side shall have an “anti-slip” surface (i.e. Velcro) to prevent the mat for hands from slipping away.

5. Colour
   5.1. The upper surface must not show optically disturbing patterns or insignia.
   5.2. The colour must be uniform and in contrast to the run-up area.
   5.3. The FIG may designate the colour for certain events.
Women’s Artistic Gymnastics

Construction / Description of material, measurements

1. Form
   1.1. Spotter mats must be covered with a material which will slide easily.
   1.2. The mats must be provided with at least two handles or one long handle on the two long
   sides of the mat.

2. Measurements
   2.1. Length       200 cm - 50 cm
   2.2. Width       150 cm - 50 cm
   2.3. Thickness     15 cm - 5 cm

3. Functional properties
   3.1. The foam of the spotter mats shall have a density of 20 kg / m³ (+/- 2 kg /m³). The ultimate
   tensile strength of the foam (ISO 1798: 2008) shall be ≥ 90 kPa, the compression stress
   value 40% shall be 2,5 (+/- 0.5) kPa (ISO 3386-1: 1986 – Amd1: 2010).

4. Colour
   4.1. Preference should be given to uniform colours.
   4.2. The upper surface must not show optically disturbing patterns or insignia.
   4.3. The FIG may designate the colour for certain events.

Remark: The specifications for the spotter mat are the same as for the spotter mat in Trampoline
Gymnastics (TRA12).
Women’s Artistic Gymnastics

Construction / Description of material, measurements

1. Use
   1.1. Helping device for the adjustment of an individual tension at the cables of the Rings, the High Bars and the Uneven Bars in MAG / WAG competitions.
   1.2. The use is not mandatory for FIG competitions, but highly recommended to protect the athletes from an unexpected breakdown of the gymnastics equipment due to too low cable tension or by damaging parts of the apparatus especially the ground anchors due to too high cable tension. Furthermore, the use serves the coaches and athletes to set the same individual tension on the cables in the training halls, the warming up hall and the competition hall. For the last aspect, the use of TCS makes sense only if devices are provided at all Rings, High Bars and Uneven Bars in the training halls, the warm-up hall and the field of play for the competition in question.

2. Requirements
   2.1. The device must be able to measure and digitally display the tension at the cables in Newtons with 100 N increments. The TCS should be applicable to the tensioning of all FIG approved Rings, High bars and Uneven Bars and shall be implemented at the chains (or cables). If used, Tension Control Sensors should be installed at all of these apparatuses in the training halls, the warming up hall and the competition site.
   2.2. A visible warning lamp will avoid dangerous cable adjustments by overload or underload in the tension of the equipment.
   2.3. With TCS athletes and coaches should have the possibility to adjust the same individual tension at the cables for the training, warming-up and competition apparatuses.
   2.4. A TCS shall be easy adjustable between chain or wires by shackles at all FIG approved equipment.

3. General Functions
   3.1. The TCS shall contain a clearly legible, digital display showing the tensile force between the attachment points in Newtons at 100 N increments. The unit Newton must be indicated by the letter “N”.
   3.2. The digital display of the tensioning force and a clear visible warning light (if over- or underload occurs; see 3) shall only appear for a measurement time interval between 10 and 15 seconds after pressing an easily accessible START- button.
   3.3. The warning lamp shall light up during the measurement time interval if there is an over- or underload. This is the case for a tension of x > 5000N and x < 1000N.
   3.4. The mass of a TCS including its shackles shall be lower than 0.9 kg.
   3.5. The effective inner length between the two shackles as attachment between the chains or cables shall not exceed 0.18m.
   3.6. The measurement range shall be 0 – 10000N (displayed until 5000N in steps of 100N).
   3.7. The strength of a TCS including shackles shall be x > 15000 N.
   3.8. A TCS shall have no wired power supply. Only batteries or load cells with enough capacity (> 5 * 24h) and with easy charging are allowed.
   3.9. A suitable charger must be included with the TCS. If this is not the case, standard connections (e.g. USB, Micro-USB, USB Type C etc.) shall be used and a clear message shall be sent to the customer when purchasing a TCS that he himself has to take care of the charger, power bank or similar.

---

Additional remark:
The one and ten digits, which are always 0 due to the rounding, do not have to be displayed variably but can be fixed on the housing. The combined reading of the variable display and the firmly imprinted digits shall result in Newton values.
3.10. The TCS shall come with an English written documentation containing a user’s guide and all necessary technical descriptions (including installation procedures). Furthermore, this documentation shall contain the following recommendation for mounting of a TCS:

4. Recommendations for mounting of TCS

4.1. In general, only one single TCS on one of the four tension cable sides of the gymnastic apparatus is enough. However, two TCSs are required for special asymmetrical constructions of the Uneven Bars.

4.2. A TCS should be installed at a cable where the desired tension for the gymnastic apparatus can be adjusted. In addition, the TCS must always be installed towards the head judge of the gymnastic apparatus.

4.3. When measuring with TCS at the Uneven Bars, it is particularly important that all equipment in the training halls, the warm-up hall and the competition hall is set up with exactly the same distances between the ground anchors and the equipment stands, as otherwise different measured values may occur with the same functional property of the gymnastic equipment.

4.4. A sufficient battery charge must be ensured for the entire duration of the competitions. In addition to a full charge at the beginning, this must be done during longer competitions by charging with the corresponding chargers during the periods of no use (e.g. overnight. If chargers or Powerbanks are not included in the scope of delivery, the user must ensure that they are available in sufficient numbers.

4.5. If the use of TCS is planned, it is advisable to contact the manufacturer of the gymnastics equipment in good time in order to ensure that the additional length by the TCS will not cause any problems with the cables and chains. If necessary certain suitable accessories need to be ordered from the supplier(s).
2.3. RG Rhythmic gymnastics
Performance Area

Rhythmic Gymnastics

Construction / Description of material, measurements

1. Form
   1.1. The Performance Area shall have a square format. The surface must be horizontal, even and without gaps.
   1.2. Border:
      1.2.1. Horizontal, even, and at the same height as the performance area.
   1.3. Safety zone:
      1.3.1. The safety zone shall be kept totally free as a surrounding zone around the performance area and the border. It shall be horizontal, even and without gaps.
   1.4. Direction of carpet seams:
      1.4.1. If the surface is composed of several parallel carpet rolls, the seams shall be perpendicular to the direction of the judges’ tables.
   1.5. The performance area shall be composed by a damping under – construction and an overlying carpet

2. Measurements
   2.1. Performance area 1300 x 1300 cm
       Tolerance +/- 3 cm
   2.2. Diagonals of the performance area: 1838 cm +/- 5 cm
   2.3. Border (25 + 25) 50 cm
   2.4. Safety border 200 cm
   2.5. Border as a variant
      2.5.1. Horizontal Area, Width 25 cm
      2.5.2. Slope max. 20 %, Width 25 cm
   2.6. When there is a delimitation strip between the performance area and the border:
      2.6.1. Width of the delimitation strip 5 cm +/- 0.5 cm
      2.6.2. The delimitation strip is part of the performance area.
   2.7. Performance area and border:
      2.7.1. Equal elasticity on the surface as well as dampening.
      2.7.2. When in use it should not have any motion energy.
      2.7.3. Elasticity and dampening must be balanced in such a way that they guarantee the gymnast stability and freedom of movement. It must not restrict turns and slide movements.
      2.7.4. The surface cover of the performance area must provide a balance between anti-skid and slippage. It must not cause skin burns.
      2.7.5. The performance area must not produce disturbing sound during the execution of an exercise. It must assure a low noise level.

3. Colour
   3.1. Of plain colour which choice is left to the manufacturer’s discretion. Dark colours are not allowed. For certain events the FIG may stipulate the colours. The delimitation shall have a clear contrast to the performance area

Norms / Functional properties: Regarding tests carried out by FIG Tests Institutes – please see chapter IV

All hand apparatuses which are supposed to be used at FIG sanctioned events shall have markings according to FIG rules. The markings shall not be removable. At FIG sanctioned events only FIG approved hand apparatuses shall be used.

Construction / Description of material, measurements

RG 2 – Rope

1. Material: Hemp or similar suitable material
2. Length: Optional for Senior and Junior Gymnasts
3. Thickness: Uniform or reinforced in the centre.
4. Shape: Both rope-ends, with or without knots. Without wooden-handle. May be wrapped with a thin non-slip material in a length corresponding to the width of a hand.
5. Colour: Optional. Bright colour preferred

RG 3 – Hoop

1. Material: Wood or synthetics
2. Weight:
   2.1. 300 g. minimum
   2.2. 260 g. minimum for Juniors
   The weight specification shall be fulfilled unwrapped.
3. Inner diam.:
   3.1. 800 – 900 mm Senior Gymnasts
   3.2. 700 – 900 mm Junior Gymnasts
   Can be wrapped

RG 4 – Ball

1. Material: Rubber or soft plastic, antistatic
2. Weight: 400 g. minimum
3. Diameter: 180 – 200 mm Senior and Junior Gymnasts

RG 5 – Clubs

1. Material: Wood or synthetics
2. Length: 400 – 500 mm Senior and Junior Gymnast
3. Weight: 150 g. min.
   The weight specification shall be fulfilled unwrapped.
4. Shape: Bottle shape
5. Diameter of the head: 30 mm max.
   (The head of the clubs must be fixed firmly to the neck of the apparatus. It shall not rotate)
Rope, Hoop, Ball, Clubs, Ribbon

RG 6 – Ribbon

1. Material: Satin or similar
2. Length: Total length 6 m (min) in one piece (5 m min for Juniors). The part at which the ribbon is attached to the cane is doubled in a length of 1 m ± 0.1 m.
3. Weight: 35 g. minimum, without the cane (30 g. min. for Juniors)
4. Width: 40 – 60 mm

RG 7 – Ribbon cane

1. Cane
   1.1. Material: Wood, bamboo, fibreglass or synthetics
   1.2. Material: Wood, bamboo, fibreglass or synthetics
   1.3. Length: 500 – 600 mm
   1.4. Diameter: maximum 10 mm at the thickest point.
   1.5. Shape: cylindrical or conic. The handle may be wrapped in a thin anti-slip material with a length of 100 mm max.
   1.6. Colour: Optional.
2. Fixture:
   2.1. Material: cord, nylon-thread or similar item, or moveable ring resp. a swivel attached to the cane.
   2.2. Length: 70 mm maximum

Measurement Table for RG with Balance

Rhythmic Gymnastics for testing prescriptions of RG 3,4,5,6,7

Construction / Description of material, measurements

1. Form
   1.1. The apparatus consists of a table or a plate which can be placed on a table with special trays and tools for controlling prescribed parameters of RG equipment during the competition. An additional, suitable balance is needed.

2. Measurements:
   2.1. The device should be suitable for measuring:
       2.1.1. interior diameter of hoops (RG3) (Senior): 800 – 900mm
       2.1.2. interior diameter of hoops (RG3) (Junior): 700 – 900mm
       2.1.3. diameter of balls (RG4): 180 – 200mm
       2.1.4. diameter of the end of clubs (RG5): 30mm max.
       2.1.5. diameter of the cane of gymnastic ribbons (RG6): 10mm max
       2.1.6. length of clubs (RG5): 400 - 500mm
       2.1.7. length of ribbons (RG6) (Senior): 5000mm min.
          [can be measured as 6 * 1000mm]
       2.1.8. length of ribbons (RG6) (Junior): 5000mm min.
          [can be measured as 5 * 1000mm]
       2.1.9. length of the doubled part of ribbons (RG6): 1000mm (+/- 100)
       2.1.10. length of the cane of gymnastic ribbons (RG6): 500 - 600mm
       2.1.11. length of the optional handle part of the cane of gymnastic ribbons (RG6): 100mm max.
       2.1.12. length of the fixture of gymnastic ribbons (RG6): 70mm max.
       2.1.13. width of ribbons (RG6): 40 - 60mm

2.2. The balance should be suitable for measuring the following weights ("masses") with a precision of +/- 1 g:
       2.2.1. hoops (RG3): 300g min.
       2.2.2. balls (RG4): 400g min.
       2.2.3. clubs (RG5): 150g min.
       2.2.4. gymnastic ribbons without the cane (RG6, Seniors): 35g min.
       2.2.5. gymnastic ribbons without the cane (RG6, Juniors): 30g min.

2.3. The measurement trays for diameters of Hoops for measuring diameters shall control the whole circles, not only segments of the circles ("hoops shall not be bent during measurements"). Each Tray of 700mm, 800mm & 900 mm, must have a thickness minimum of 15mm.

2.4. All measures shall be indicated unmistakably on labels.

2.5. The weight of hoops shall be measured in a hanging position of the hoops.
Example for positioning of trays and tools for controlling the prescribed parameters:
Janssen-Fritsen presents:

Free Exercise Floor Apollo Antwerp
Springboard Kreon Gold
Springboard Iris Silver
The new Pegases
2.4. TRA Trampoline Gymnastics
Trampoline

1. Frame
   1.1. Interior measurements of the frame, with bed under tension, but without frame pads:
       1.1.1. Length          505 cm +/- 6 cm
       1.1.2. Width           291 cm +/- 5 cm
   1.2. For safety reasons the profile of the frame must have rounded edges. The radius must be
       min 15mm. The profile of the frame may also be oval or round, but in these cases, it must be
       guaranteed, that coaches are able to stand on the frame safely in order to give the
       necessary support to the athletes. Special attention must be given to the padding of the
       frame.

2. Trampoline Bed
   2.1. The height of the bed, measured from the floor, shall meet all of the following three
       specifications:
       2.1.1. At least one of the heights h₁; h₂; h₃ or h₄ (see figure)   115.5 cm +/- 0.5 cm
       2.1.2. All heights h₁; h₂; h₃ and h₄ (see figure) ≥ 115.0 cm
       2.1.3. The heights h₁; h₂; h₃ and h₄ shall be adjusted, so that the bed is horizontal in all
               longitudinal and transversal directions with all four feet of the trampoline in firm contact
               to the ground.
   2.2. Dimensions of the bed under tension ready for use, including attachment straps:
       Length (bl₁, bl₂; bl₃, see figure)   428 cm +/- 6 cm
       with: max(bl₁, bl₂; bl₃) – min(bl₁, bl₂; bl₃) < 3 cm
       Width (bw₁; bw₂; bw₃; see figure)   214 cm +/- 5 cm
       with: max(bw₁, bw₂; bw₃) – min(bw₁, bw₂; bw₃) < 3 cm
   2.3. The bed must be constructed from light coloured bands, webs, strings etc., which must be
       held together in such a way that they are not displaced during use.
       2.3.1. Web Construction:
               2.3.1.1. Width of web under tension    0.55 cm +/- 0.15 cm
               2.3.1.2. Distance between any two webs    1.6 cm (max.)
       2.3.2. String Construction:
               2.3.2.1. Width of strings under tension        0.3 cm +/- 0.1 cm
               2.3.2.2. Distance between any two strings no greater than 1 cm
   2.4. The bed must be strong enough to withstand wear, and not tear when in use.
   2.5. Two rectangular areas must be marked out clearly in red lines. Each area must be
       symmetrically oriented to the middle of the bed. The width of the delimitation lines must be
       between 13 and 24 mm. The lines belong to the marked areas:
       2.5.1. Area A (rectangle 215 * 108):
               2.5.1.1. the delimitation lines for area A shall not only define the rectangle area of 215 *
                       108 cm, but shall also be continued to the end of the bed (see figure).
               2.5.1.2. Length (cl₁, cl₂, cl₃, see figure)   215 +/- 4 cm
                       with: max(cl₁, cl₂, cl₃) – min(cl₁, cl₂, cl₃) < 2 cm
               2.5.1.3. Width (dw₁, dw₂, dw₃, see figure)   108 +/- 4 cm
                       with: max(dw₁, dw₂, dw₃) – min(dw₁, dw₂, dw₃) < 2 cm
       2.5.2. Area B (quadratic 108 * 108):
               2.5.2.1. Length (el₁, el₂, el₃, see figure)   108 +/- 4 cm
                       with: max(el₁, el₂, el₃) – min(el₁, el₂, el₃) < 2 cm
               2.5.2.2. Width (dw₁, dw₂, dw₃, see figure)   108 +/- 4 cm
                       with: max(dw₁, dw₂, dw₃) – min(dw₁, dw₂, dw₃) < 2 cm
       2.5.3. The center of the bed must be indicated by a red cross.

¹ Trampoline beds are subject to considerable changes in dimensions due to the high tensions. All length
specifications shall be fulfilled at the following instants of times:
Competition: At the time of the officially announced apparatus control before the competitions and thereafter.
During other official apparatus controls (i.e. test at a FIG test institute): After a period of 24h with the trampoline
unfolded, ready for use and preconditioned with 20° ± 3° C and a humidity of < 60%.
Trampoline

2.5.3.1. Dimensions
70 cm +/- 3 cm

3. Suspension
The bed must be suspended with springs in such a way as to present no danger to users. The tension on the bed should be such that the bed stabilises within a second after contact.

4. Area free of obstruction beneath the bed
The trampoline must be constructed so that the competitor will not touch any part of the frame beneath the bed.

5. Safety Padding
5.1. The frame and springs must be entirely covered by a shock absorbing padding, the thickness of which must be between 3.0 cm and 5.0 cm at the edge near the bed. At the edge over the frame the thickness must not be necessarily the same: It can increase up to 10 cm, however the maximum slope between the two edges shall not be higher than 10 degrees from horizontal plane. The padding must not touch any part of the bed. The padding may extend over the bed by up to 6 cm, but the available unobstructed jumping area may not be smaller than the minimum bed size (422 cm x 209 cm).
5.2. The padding should be firmly fixed to the frame without hindering the normal action of the bed and springs. It should not cause noise through flapping.
5.3. The bottom of the padding, at the side of the bed, should not protrude above the level of the bed by more than 6 cm. The padding must be stable enough to allow for a person to stand on it without protruding into the spaces between the springs.
5.4. The foam of the safety padding shall have a density of 30 kg / m³ (+/-3.0 kg /m³). The ultimate tensile strength of the foam (ISO 1798: 2008) shall be ≥ 260 kPa, the compression stress value 40% shall be 70,0 (+/- 15,0) kPa (ISO 3386-1 – Amd1: 2010).

6. Safety Platform
6.1. Platforms must be placed at both ends of the trampoline. The platform must be made of a framework which is firmly attached to the trampoline. The platforms must be constructed so that it is shock absorbent and the surface must be covered with a shock absorbing mat, firmly fixed to the platforms.
6.1.1. The mats must have the following dimensions:
6.1.1.1. Width: 300 cm +/-2,5 cm
6.1.1.2. Length (including wedge, 40 cm) 240 cm +/-2,5 cm
6.1.1.3. Thickness at the bedside 7,5 cm +/-0,5 cm
6.1.1.4. Thickness at the end 20 cm +/-2,0 cm
6.1.2. The platforms dimensions must be such, that the mats are sufficiently supported to ensure, that on landing, it supports the weight of the competitor without collapsing or folding.
6.1.3. The foam of the mats shall have a density of 25 kg / m³ (+/-2,5 kg /m³). The ultimate tensile strength of the foam (ISO 1798: 2008) shall be ≥ 130 kPa, the compression stress value 40% shall be 4,0 (+/- 1,0) kPa (ISO 3386-1 – Amd1: 2010).
6.2. The mat covering the platform shall end between inner and outer edge of the frame pad. The distance to the inner edge of the frame pad shall be 5 to 8 cm. (see figure)

7. Safety mats on the ground: Mats shall rest on the ground around and between the trampolines for safety reasons. All mats shall be of the same height and type. One of the following two types shall be used:
7.1. Mats which satisfy the specifications of MAG11/WAG11/TR11. (measures: Height: 20 cm, Width: 200cm, Tolerance: +/- 1 cm).
7.2. Mats with a core which shall have a density of 25 kg / m³ (+/-2,5 kg /m3). The ultimate tensile strength of the foam (ISO 1798: 2008) shall be ≥ 130 kPa, the compression stress value 40% shall be 4,0 (+/- 1,0) kPa (ISO 3386-1 – Amd1: 2010). Ultimate tensile strength (ISO 1798: 2008) of the cover material shall be 560-600 kPa. (measures: Height: 20 cm min, Width: 200cm, Tolerance: +/- 1 cm).

Double Mini - Trampoline

1. Frame
   1.1. For safety reasons no metal bars or other firm fixings are allowed across the ends of the Double Mini-Tramp other than at floor level.
   1.2. For safety reasons the profile of the frame must have rounded edges. The radius must be minimum 15mm.
   1.3. Safety Padding
      1.3.1. The frame and springs shall be entirely covered by shock absorbing padding, the maximum Thickness of which shall be greater or equal 30mm and not be greater than 55mm. The padding must not cover any part of the bed.
      1.3.2. The padding should be firmly fixed to the frame without hindering the normal action of the bed and the springs. Nor should it cause noise through flapping.
      1.3.3. The bottom of the padding at the side of the bed should not protrude above the level of the bed by more than 6 cm.
      1.3.4. The bars beneath the bed must be padded.
      1.3.5. The frame ends on the dismount end must be covered with at least 50mm pads firmly joined together with the other padding.

2. Bed
   2.1. The bed must be constructed from light coloured bands, webs, strings etc., which must be held together in such a way that they are not displaced during use.
   2.2. Dimensions of the bed under tension
      2.2.1. Length bl1; bl2; bl3 (see figure), edge to edge of included end markers 285 cm +/- 5 cm with: max(bl1, bl2; bl3) – min(bl1, bl2; bl3) < 10 cm
      2.2.2. Width (bw1; bw2; bw3; see figure), including attachment straps: 92 cm +/- 4 cm with: max(bw1, bw2; bw3) – min(bw1, bw2; bw3) < 2 cm
   2.3. Height of bed, measured from the floor with bed under tension:
      2.3.1. Mounting End 45 cm +/- 1,5 cm
      2.3.2. Dismounting End 70 cm +/- 1,5 cm
   2.4. Width of web under tension: 0,4 cm min. 1,3 cm max.
   2.5. The strands of webbing (or string) must be sewn together, and the distance between any two strands must not be greater than 1, 8 cm (max: 1 cm with string-construction).
   2.6. The bed must be strong enough to withstand wear, and not tear when in use.
   2.7. The Penalty Zones must be marked in red on the bed. The dimensions of these zones are:
      2.7.1. End markers 13 cm +/- 2 cm
      2.7.2. Centre zone 39 cm +/- 1 cm
      2.7.3. Distance of the Centre Zone 90 cm +/- 2 cm
      (Measured from the mounting end)

3. Landing Area
   3.1. The landing area shall be covered with a landing mat (TRA11) which is shock absorbent and which allows a stable landing on the feet. Dimensions of the landing area must be:
      3.1.1. Length (landing mat, TRA11) 600 cm +/- 1 cm
      3.1.2. Width (landing mat, TRA11) 300 cm +/- 1 cm
      3.1.3. Thickness (landing mat, TRA 11) 30 cm +/- 1 cm
   3.2. Additional safety mat behind the landing area
      3.2.1. An additional safety mat with the minimum dimensions of 300 * 200 * 20 cm must be placed directly behind the landing area.

---

1 Double Mini Trampoline beds are subject to considerable changes in dimensions due to the high tensions. All length specifications shall be fulfilled at the following instant of times:
   Competition: At the time of the officially announced apparatus control before the competitions and thereafter.
   During other official apparatus controls (i.e. norm-control by TC members): After a period of 24h with the double mini trampoline unfolded, ready for use and preconditioned with 20° ± 3° C and a humidity of < 60%.
Double Mini - Trampoline

3.3. Landing Zones
3.3.1. Two landing zones must be marked out in the landing area, with either the whole zone in a contrasting colour or, with lines 50mm wide in a contrasting colour. If lines are used, they have to belong to their zones.

3.3.2. Landing Zone C: The size of landing zone C is identical to the size of the Landing Area (see 3.1 above)

3.3.3. Landing Zone B: The outer edge of the landing zone (or lines) marks the boundary of the landing zone, the dimensions of which must be:
   3.3.3.1. Length 400 cm +/- 1 cm
   3.3.3.2. Width 200 cm +/- 1 cm

3.3.4. Landing Zone A: The outer edge of the landing zone (or lines) marks the boundary of the landing zone, the dimensions of which must be:
   3.3.4.1. Length 250 cm +/- 1 cm
   3.3.4.2. Width 100 cm +/- 1 cm

3.3.5. For certain events the FIG may stipulate the colours of the different zones.

4. Run-up
4.1. Floor mats shall be used on the run-up:
   4.1.1. Length 2000 cm + 250 cm
   4.1.2. Minimum Width 100 cm
   4.1.3. Thickness 2.5 cm +/- 0.5 cm

5. Safety mats on the ground: On the two sides of the DMT a mat shall rest on the ground for safety reasons (measures: Height: 20 cm, Width: 200cm, Tolerance: +/- 1 cm). They have to satisfy the specifications of MAG11/WAG11/TRA11.

Tumbling Track

1. Tumbling Track
   1.1. The tumbling track must be constructed with a sprung surface, which must be padded. If constructed of several units these must be firmly fixed together as so not to separate in use and showing no space between them.
   1.2. Dimension:
      1.2.1. Length  2500 cm + 100 cm
      1.2.2. Height  30 cm max (from 1.1.2012: ± 1 cm)
      1.2.3. Width of construction  200 cm ± 5 cm
   1.3. Markings
      1.3.1. Two lines, 50mm wide in a contrasting colour must mark the outer edge (boundary) of the track.
      1.3.2. Distance (incl. lines):  150 cm +/- 1 cm
      1.3.3. A centre line, 5 cm wide, in a contrasting colour, must mark the centre line of the tumbling track.

2. Landing Area
   2.1. The landing area shall be covered with a landing mat (TRA11) which is shock absorbent and which allows a stable landing on the feet. The height of the landing mat shall be equal to the height of the tumbling track.
   2.2. Dimensions of the landing area must be:
      2.2.1. Length (landing mat TRA11)  600 cm +/- 1 cm
      2.2.2. Width (landing mat TRA11)  300 cm +/- 1 cm
      2.2.3. Thickness (landing mat TRA11)  30 cm +/- 1 cm
   2.3. Additional safety mat behind the landing area
      2.3.1. An additional safety mat with the minimum dimensions of 300 * 200 * 20 cm must be placed directly behind the landing area.
   2.4. Landing Zone
      2.4.1. A landing Zone must be marked out in the landing area, with either the whole zone in a contrasting colour or, with lines 50mm wide in a contrasting colour. The outer edge of the landing zone (or lines) marks the boundary of the landing zone, the dimensions of which must be:
         2.4.1.1. Length  400 cm +/- 1 cm
         2.4.1.2. Width  200 cm +/- 1 cm
         2.4.1.3. A non-compulsory supplementary mat in the same dimension as the landing zone can be used (TRA13). In this case the supplementary mat must be attachable to the landing mat (i.e. using Velcro). The colour of the supplementary mat must be in contrast to the landing mat and the tumbling track or with lines according to the description above.

3. There must be a run up area (same level as tumbling track) prior to the tumbling track.
   3.1. Dimensions:
      3.1.1. Length  1000 cm+100 cm
      3.1.2. Minimal width  100 cm

4. There must be a hard and a soft Vaulting Board available which meets the specifications of TRA 14.

Double Mini-Trampoline; Tumbling; Trampoline

Construction / Description of material, measurements

1. Form
   1.1. The surface must be horizontal, even and without gaps. To arrange the whole area several mats can be composed.

2. Measurements
   2.1. Height safety mat Trampoline; DMT (TRA1, TRA2): 20 cm +/- 1 cm
   2.2. Height landing mat DMT; Tumbling (TRA2, TRA3): 30 cm +/- 1 cm

3. Functional properties
   3.1. Absorbency:
      3.1.1. The mats must absorb motion energy, in order to reduce the reaction transmitted to the body of the landing gymnast, to a tolerable proportion.
      3.1.2. They must respond to increased penetration with an evenly increasing resistance.
   3.2. Stability and Freedom of Movement:
      3.2.1. Absorbency of the mats must be balanced in order to guarantee standing, walking stability and freedom of movement; there must be an equal balance between elasticity and absorbency properties.
   3.3. Indentations caused by the incidence of compressive forces must not encase the body parts, thereby hindering freedom of movements mainly of rolling a part of the body.
   3.4. If a cover is used, such cover may not cause any hindering folds. The mats' upper surface material must offer a balance between anti-slip and slippage. It must be neither slippery nor possess inhibitory resistance.
   3.5. By no means should mats be dislocated during performances. An anti-ski cover on the mats' underside may provide this condition.
   3.6. The border zones of the mats which are pushed together should practically have the same functional properties as the remaining surface. Impacts on the border zones should not cause different indentations than on the remaining surface. For this purpose, and to bridge joints, continuous runners are permitted.

4. Colour
   4.1. Preference should be given to uniform colours.
   4.2. The upper surface must not show optically disturbing patterns or insignia.
   4.3. The FIG may designate the colour for certain events.
Spotter mat
Trampoline, Double Mini-Trampoline

Construction / Description of material, measurements

1. Form
   1.1. Spotter mats must be covered with a material which will slide easily.
   1.2. The mats must be provided with at least two handles or one long handle on the two long sides of the mat.

2. Measurements
   2.1. Length          200 cm - 50 cm
   2.2. Width         150 cm - 50 cm
   2.3. Thickness             15 cm -   5 cm

3. Functional properties
   3.1. The foam of the spotter mats shall have a density of 20 kg / m³ (+/- 2 kg /m³). The ultimate tensile strength of the foam (ISO 1798: 2008) shall be ≥ 90 kPa, the compression stress value 40% shall be 2,5 (+/- 0.5) kPa (ISO 3386-1: 1986 – Amd1: 2010).

4. Colour
   4.1. Preference should be given to uniform colours.
   4.2. The upper surface must not show optically disturbing patterns or insignia.
   4.3. The FIG may designate the colour for certain events
Tumbling

Construction / Description of material, measurements

1. Use
   1.1. A supplementary mat must be available for the landing area in Tumbling. The usage is not compulsory.

2. Form
   2.1. Their upper surface must be horizontal, even and without gaps. It shall have the size of the landing zone. The supplementary mat can be laid on the landing mats (TRA11), if used it must be attachable to the landing mat (i.e. using Velcro).

3. Measurements
   3.1. Height of the supplementary mat: 10 cm * 1 cm
   3.2. Surface: 400 x 200 cm * 1 cm

4. Functional properties
   4.1. The foam of the supplementary mats shall have a density of 25 kg / m³ (+/- 2.5 kg /m³). The ultimate tensile strength of the foam (ISO 1798: 2008) shall be ≥ 115 kPa, the compression stress value 40% shall be 4.0 (+/- 1.0) kPa (ISO 3386-1: 1986 – Amd1: 2010).
   4.2. Their upper surface must be horizontal, even and without gaps.
   4.3. The supplementary mats have to be laid on the landing mats. The supplementary mat shall be attachable (i.e. using Velcro).

5. Colour
   5.1. The colour of the supplementary mat must be in contrast to the landing mat and the tumbling track or with lines according to the description of the landing zone (see TRA3).
   5.2. The upper surface must not show optically disturbing patterns or insignia.
   5.3. The FIG may designate the colour for certain events
Vaulting Board

Tumbling

- “Hard” and “Soft”

Construction / Description of material, measurements

1. Form
1.1. The profile of the vaulting board must adhere exactly to the respective blueprint.
1.2. Its upper surface rises in an arched form, approaching the horizontal between 75 cm and 95 cm, measured from the frontal angle. The height reached at this point, may not be exceeded. After this point, the upper surface may continue horizontally or slope downward.
1.3. The rise of the arch is 3.5 cm +/- 0.5 cm.
1.4. For competitions a “soft” and a “hard” vaulting board shall be available. The “hard” board shall be marked with a dot on the surface.

2. Measurements
2.1. Length 120 cm * 1 cm
2.2. Width 60 cm * 1 cm
2.3. Height 20 cm * 1 cm
2.4. Height (run-up side) max 3 cm
2.5. Cushion Cover 2 cm * 0.5 cm
2.6. Total height with cushion cover 22 cm * 1.5 cm
2.7. Free space between floor and the lower edge of the vaulting board at the run-up side max. 1 cm *Tolerance +/-

2.8. The stipulated length and height refer to the vertical projection of the upper plate, i.e. the take-off plate.
2.9. The base may be larger, but cannot extend more than 2 cm beyond the projection of the board.
2.10. Labelling of the “hard” vaulting board on the surface by a dot with clear contrast on the longitudinal midline:
2.10.1. Distance to the side of run up 5 cm
2.10.2. Diameter 8 cm

3. Functional properties
3.1. The functional properties of the vaulting board (hardness, damping, elasticity) shall not be adjustable (i.e. springs must be fixed so that they cannot be easily removed by hand).
3.2. The elasticity of the vaulting board must be most effective in the area between 75 cm and 95 cm, measured horizontally from the frontal angle.
3.3. The vaulting-board must dampen the counter pressure, i.e. reduce motion energy. Elasticity and absorbency must be evenly distributed, so that the effect of the vaulting board differs only slightly, regardless whether the force of the impact is at the middle axis, or away from it.
3.4. The upper surface of the vaulting board must offer slip resistance.
3.5. The vaulting board must not produce disturbing sounds during its use.
3.6. The board shall not slide at the time of impact of the athlete. This shall be achieved by anti-slip devices at the bottom side of the board or at the board underneath the vaulting board. The slip resistance shall be provided especially when the board bottoms out at the middle part.
3.7. The vaulting board and its base may not have any sharp corners, edges and no protruding parts. Mainly the upper and under edge of the upper part of the Vaulting board towards the apparatus side (Vaulting Table, Balance Beam of Uneven Bars) shall be cushioned and rounded.

4. Colour
4.1. The choice of colour is left to the discretion of the manufacturer.
4.2. With exception of the dot for “hard” vaulting boards optically disturbing patterns, stripes or insignia on the upper surface are not permitted.
4.3. The FIG may designate the colour for certain events.

Time measurement device for trampoline competitions - TMD

Trampoline – Device for judging individual and synchronized competitions

Construction / Description of material, measurements

1. General requirements
   1.1. The device must be able to measure a sum of the flight times for the skills in individual competitions as well as deductions due to asynchronous landing in synchronized competitions.

2. Variants: Different measuring methods result in two variants of the TMD:
   2.1. **Variant A:** Measurements up to 10 cm below the unloaded trampoline bed (e.g. through photoelectric barriers along defined measurement lines).
   2.2. **Variant B:** Measurements relative to the unloaded surface of the trampoline bed. This variant can be used, for example, in combination with other measuring devices (HDMD - TRA 16).

3. General functions
   3.1. Mode for individual competitions: The device is installed at the trampoline which is used for the competition. It has to be administrated by a specialized judge. After a “Start” during the flight phase of the first element the device shall register all time intervals between take-offs and the landings of the gymnast (flight times) including the flight time of the first element. At the end of the routine the device has to calculate, to indicate and to memorize the flight times of the elements as well as their sum (up to 10 skills).
   3.2. Mode for synchronized competitions: The device is installed at the two trampolines which are used for the competition. It has to be administrated by a specialized judge who is responsible for the evaluation of the score of synchronization (S). After a “Start” during the flight phase of the first element the device shall register all time intervals between the landings of the gymnasts. After the end of the routine the device has to calculate, to indicate and to memorize the deductions for each skill and the total score for synchronization according to a conversion ratio between time intervals and deductions (TRA Code of Points).

4. Definitions
   4.1. **Valid for TMD Variant A**
      4.1.1. **Measurement Lines for Time of Flight and Synchronization Evaluation:** At least three parallel lines along the longitudinal side of the trampoline’s bed. The lines are arranged ≤ 100 mm below the underside of the unloaded bed installed at a trampoline which is ready for use. One line (center line) shall be exactly below the longitudinal middle axis of the jumping zone and at least two others are running in a distance of 540 (±5) mm to the center of the bed directly below the lateral boundaries of the jumping zone (see drawing).
      4.1.2. **Starting point of the flight phase:** The point in time of the release of the gymnast from all Measurement Lines by taking off from the trampoline’s bed. At that time a measurable signal for the TMD shall be provoked.
      4.1.3. **Ending point of the flight phase:** The point in time of the first contact of the gymnast with at least one of the Measurement Lines by impacting the trampoline’s bed. At that time a measurable signal for the TMD shall be provoked.
      4.1.4. **Time Difference in Landing:** Time interval at the landing after the same synchronous jump between the **Ending point of the flight phase** of the first athlete and the **Ending point of the flight phase** of the second athlete, expressed in seconds rounded down to the next lower multiple of 0.005 s (e.g.: All values less than 0.005 s are rounded to 0.000 s, all values equal or higher than 0.005 s and less than 0.01 s are rounded to 0.005 s).

   4.2. **Valid for TMD Variant B**
      4.2.1. **Measurement Plane for Time of Flight and Synchronization Evaluation:** The surface of the unloaded trampoline’s bed.
      4.2.2. **Starting point of the flight phase:** The point in time of the release of the gymnast from Measurement Plane by taking off to a flight phase.
4.2.3. **Ending point of the flight phase:** The point in time of the first contact of the gymnast with the Measurement Plane after a flight phase.

4.2.4. **Time Difference in Landing:** Time interval at the landing after the same synchronous jump between the **Ending point of the flight phase** of the first athlete and the **Ending point of the flight phase** of the second athlete, expressed in seconds rounded down to the next lower multiple of 0.005 s (e.g.: All values less than 0.005 s are rounded to 0.000 s, all values equal or higher than 0.005 s and less than 0.01 s are rounded to 0.005 s).

4.2.5. **Time of Flight:** Time interval during the flight phase of a jump between a **Starting point** of the flight phase and a succeeding **Ending point** of the flight phase, expressed in seconds rounded down to the next lower multiple of 0.005 s (e.g.: All values less than 0.005 s are rounded to 0.000 s, all values equal or higher than 0.005 s and less than 0.01 s are rounded to 0.005 s).

4.3. **Valid for TMD variants A and B**

4.3.1. **Time of Flight:** Time interval during the flight phase of a jump between a **Starting point** of the flight phase and a succeeding **Ending point** of the flight phase, expressed in seconds rounded down to the next lower multiple of 0.005 s (e.g.: All values less than 0.005 s are rounded to 0.000 s, all values equal or higher than 0.005 s and less than 0.01 s are rounded to 0.005 s).

4.3.2. **Total Time of Flight:** Sum of all measured Time of Flights during an exercise of an individual competition beginning with the first skill, expressed in seconds. This value in seconds is equivalent to the score for the total time of flight in points.

4.3.3. **Start:** The point in time fixed by a switch-key to be pressed by a specialized judge during the flight phase of the first element; from this time on the TMD records signals at landings of the athlete on the trampolines bed. For individual competitions the device has to remember the preceding **Starting point** of the flight phase to register the **Time of Flight** of the first element.

4.3.4. **Stop:** The point in time fixed by a switch-key to be pressed by a specialized judge, from this time on the TMD no longer takes any further measurements into account for determining the deductions.

4.3.5. **Deduction for unsynchronized Landing:** Deduction in points for the synchronization of each element according to a conversion from the Time Difference in Landing according to the TRA Code of Points.

**Example 1:** Table with examples to determine the Deduction for an unsynchronized Landing with a factor of 2.5, rounded down to 1/100 and a special treatment (*) (**): for more than 0.4 s (TRA Code if points 2017):

<table>
<thead>
<tr>
<th>Time difference in landing (s) – rounded down to next 5/1000s</th>
<th>Deduction (pts)</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.010</td>

</tr>
<tr>
<td>0.355</td>
<td>0.88 pts</td>
</tr>
</tbody>
</table>

(*) if 0.4 <= x < 0.5 then x:= 0.4 s and deduction:= 1.00 pts
(**) if x >= 0.5 routine should be stopped

4.3.6. **Sum of Deduction for synchronized competitions:** The time differences in landing (rounded down to next 5/1000s) should be accumulated after each landing, multiplied by 2.5 and then rounded down to the next 1/100 pts to give a Sum of Deduction for all previous skills.

4.3.7. **Total Synchronization Score:** The Total Synchronization Score should be shown as maximum 10.0 pts minus the Sum of deductions in case of 10 skills (see example 2). Otherwise the maximum score equals the number of the counted skills (for example 5.0 pts for 5 skills). The device shall automatically detect how many skills were performed...
synchronously and stop judging if the time difference in landing is equal or exceeds 0.5 seconds.

Example 2: Calculation for the Sum of deduction and the Total Synchronization Score for a full exercise with 10 skills.

Total Synchronization Score := 7.43 pts

5. Specific requirements

5.1. The device shall not interfere with the performance of the athletes nor shall it provoke any restriction of the functional properties of the trampoline.

5.2. The detectors for the Starting and Ending Points of the flight phases shall be installable at any standardized trampoline. The fixation shall be below the apparatus (trampoline with padding and safety platform) with no protruding parts. If there are cable connections, they must be long enough to reach the displacement specifications given for the “Arena for Trampoline Competitions” (see: Part II 4. Competition area; TRA). All other components of the device shall be out of the area of the safety mats on the ground.

5.3. If emitters of sound, light or radio waves are used, they shall not harm participants, judges, spectators or other staff.

5.4. If the device needs external power, it must be provided with backup power, providing a battery life for at least 5 minutes after disconnecting the external power source.

5.5. The system must provide time measurements with an error lower than ± 0.005 s.

5.6. The TMD shall come with an English written documentation containing a user’s guide and all necessary technical descriptions.

6. Technical features

6.1. The control device or the control of the computer-program shall contain a set of switches, indicators and components with the following features:

6.1.1. SELECT MODE – individual or synchronized competition

6.1.2. RESET – Preparation for a new measurement

6.1.3. START– start the measurement of an exercise, indicated by a sound

6.1.4. STOP – stop the measurement of an exercise

6.1.5. VIEW – MODE – with the following possibilities:

6.1.5.1. Synchronized competition mode: Selection for each skill (from 1 to 10) with the calculated deductions for unsynchronized landing as well as the Total Synchronization Score for the whole exercise.

6.1.5.2. Individual competition mode: Selection for each skill (from 1 to 10) with the registered Times of Flight as well as the Total Time of Flight for the whole exercise.

6.1.6. Possibilities for a manual change of the Preliminary Synchronization Score with an increment of 0.2 points.

6.1.7. Components to ensure proper function of the sensors.

6.1.8. Components to indicate proper function of the power supply.

6.1.9. All data collected by the device shall be transferable to a personal computer using a standard method of data transmission (USB, Firewire etc.).

6.1.10. Software to memorize and print all data on a personal computer with the following details:
6.1.10.1. Time Differences in Landing and corresponding Deductions for unsynchronized Landing for all skills (from 1 to 10) as well as the Total Synchronization Score for the whole exercise for synchronized competitions.

6.1.10.2. Times of Flight for all skills (from 1 to 10) as well as the Total Time of Flight for the whole exercise for individual competitions.

7. Procedures for approval

7.1. The approval of a TMD shall include the following steps:

7.1.1. Confirmation by a member federation of the FIG (according to FIG Apparatus Norms Part III, clause 4).

7.1.2. Valid for TMD Variant A

7.1.2.1. Presentation at a testing institute (forwarding a full technical documentation written in English and the complete equipment, if necessary, with a special adapter according to: FIG Apparatus Norms Part IV TRA15 - TMD)

7.1.3. Valid for TMD Variant B

7.1.3.1. Documented report by a TC member ordered by the FIG-TC-TRA-President about the functional status during a FIG competition. The testing procedure should consist of a video recording of at least 10 routines each of an individual and a synchronized FIG sanctioned Trampoline competition (selected by the FIG Secretary General). The video recording to evaluate Time of Flight and Synchro Deductions should be done with at least 400 fps and resolution at least 720p. This confirmation must include in particular the check of all calculation steps required by the TRA Code of Points. The maximum deviation of the results of the device and the video analysis may not exceed 0.2 points per exercise.

7.2. With successful fulfilment of all procedures the certification shall be given by the General Secretary.
Trampoline – Device for judging individual and synchronized competitions

Construction / Description of material

1. General requirements
   1.1. The device must be able to determine the place of landing of the gymnast(s) to the trampolines bed. The device has to evaluate the place of landing in individual and synchronized competitions in scores depending on the zone of landing at the trampoline’s bed according to the TRA Code of Points. The proper functioning of the device must be ensured for all certified trampolines at the time of the test of the device (especially in the case of constructional differences, e.g. in the base frames).

2. General functions
   2.1. Mode for individual competitions:
      2.1.1. The device has to be administrated by a specialized judge.
      2.1.2. After a “Start” during the flight phase of the first element the device shall register all horizontal displacements of the landings at bed contact for every skill and the complete routine (from 1st to 10th skill).
      2.1.3. Subsequently the device has to determine deductions according to the TRA Code of Points for each skill and for the complete routine.
   2.2. Mode for synchronized competitions:
      2.2.1. The device has to be administrated by a specialized judge who is responsible for the evaluation of the score of synchronization (S).
      2.2.2. After a “Start” during the flight phase of the first element, the device shall register each trampoline equivalent to the recording during an individual competition.
      2.2.3. After the end of the routine, the device has to calculate, to indicate and to memorize the deductions for each skill and the total score separately for each trampoline and the synchronized routine according to the specifications of the TRA Code of Points.

3. Definitions
   3.1. Horizontal Displacement at bed contact: Depending on the measurement technology used there are two variants:
      3.1.1. Area measurement: Set of all contact points between athlete’s body and the trampoline’s bed determined 20 ms after first contact. The contact points must be given in a resolution of 1 cm and represented in coordinates.
      3.1.2. Point measurement: Horizontal coordinates of the Center of Pressure at the bed contact during landing after a skill. The center of pressure is defined as intersection of a vector representing the direction of the movement of the athlete’s center of mass and the bed of the trampoline. The values shall be expressed as xy – coordinates in cm for a horizontal Cartesian coordinate system with the center of the bed as origin.
   3.2. Start: The point in time fixed by a switch-key (Judge) which has to be pressed during the flight phase of the first element; from this point in time forward the HDMD records signals at landings of the athlete on the trampoline’s bed.
   3.3. Stop: The point in time fixed by a switch-key (Judge), from this point in time forward the HDMD records no more signals at landings of the athlete on the trampoline’s bed.
   3.4. Horizontal Displacement Score: A value determined according to the TRA Code of Points.

4. Specific Requirements
   4.1. The device shall not interfere with the performance of the athletes nor shall it provoke any restriction of the functional properties of the trampoline.
   4.2. The detectors for measurements shall be installable at any certified trampolines at the time of the test of the device. If necessary, for competitions, appropriate adapters (or other technical solutions) must be available. The construction of the device shall not interfere with the specifications for trampolines in Part 2 (i.e. mats, padding, safety platforms etc.). If the height of the trampoline changes due to the use of the device, a tolerance of +4cm applies. If there are cable connections, they must be long enough to reach the distance specifications given for the “Arena for Trampoline Competitions” (see Part II; TRA; P 115). All other components of the device shall be out of the area of the safety mats on the ground.
4.3. The functionality of the device has to be ensured at any time of the competition. Especially vibrations or sliding of the trampoline’s feet shall not lead to dysfunctions.

4.4. If emitters of radio waves are used, they shall not have a capacity of more than 0.01 watts in a frequency range of 27 megahertz and above.

4.5. If the device needs external power, it must be provided with backup power, providing a battery life for at least 5 minutes after disconnecting the external power source.

4.6. When tested according to PART 4 TRA16 the system must provide horizontal displacement measurements with an error lower than ± 10 cm.

4.7. The HDMD shall come with an English written documentation containing a user’s guide and all necessary technical descriptions (including detailed calibration and installation procedures).

4.8. The device shall be delivered with a dedicated procedure to ensure the proper functionality after installation and calibration of the system. This procedure has to be done and documented by a nominated FIG representative (specialized judge, TRA TC member, FIG Apparatus Commissioner etc.) prior to the competition.

4.9. The supplier of a device is free to choose the method of the measurement of the trampoline competitions parameters as long as all specifications are fulfilled.

5. Technical features

5.1. The control device shall contain a set of buttons, indicators and components with the following features:

5.1.1. SELECT MODE – individual or synchronized competition / selection of trampoline (if there is no automatic detection available)

5.1.2. START– start the measurement of an exercise, indicated by a sound

5.1.3. STOP – stop the measurement of an exercise

5.1.4. VIEW – MODE – with the following possibilities:

5.1.4.1. **Individual competition mode:** Selection for each skill (from 1 to 10) with the registered horizontal displacements, deductions and the total score for the whole exercise.

5.1.4.2. **Synchronized competition mode:** Selection for each skill (from 1 to 10) with the registered horizontal displacements, deductions for both trampolines and the total score for both exercises (according to the TRA Code of Points)

5.2. Possibility to adjust the size of the zones to the real dimensions (measured on site every day before the competition).

5.3. A graphical presentation of the trampoline bed(s) and the Horizontal Displacement at the bed contacts of landing for each skill.

5.4. Components to ensure proper function of the sensors.

5.5. Components to indicate proper function of the power supply.

5.6. Connection devices and software to transfer all data to a personal computer. The data shall be available in a standard data format (i.e. csv, pdf, etc.).

5.7. Software to memorize and print all data on a personal computer for each skill and the complete exercises.

5.8. If specific reference points or lines at the sensors are essential for the calibration process, they shall be indicated unmistakably at the devices.

6. Procedures for approval

6.1. The approval of a HDMD shall meet the following requirements:

6.2. Confirmation by a member federation of the FIG (according to FIG Apparatus Norms Part III, clause 4).

6.3. Presentation at a testing institute (forwarding a full technical documentation written in English and the complete equipment, if necessary, with a special adapter according to: FIG Apparatus Part IV, TRA16 - HDMD

6.4. Confirmation by a TC member ordered by FIG-TC-TRA-President about the functional status during a FIG competition. This confirmation must include in particular the check of all calculation steps required by the TRA Code of Points.

6.5. With successful fulfilment of all procedures the certification shall be given by the General Secretary.
VTB — OFFICIAL FIG PARTNER
2.5 ACRO Acrobatic Gymnastics
Acrobatic Gymnastics

Construction / Description of material, measurements

1. Form
   1.1. The Performance Area shall have a square format. The surface must be horizontal, even and without gaps. All plates of the under construction within the Performance Area shall have the same arrangement of elastic elements.
   1.2. All elements of the floor have to be connected firmly to prevent slipping.
   1.3. Border: Horizontal and even, at the same height as the Performance area
   1.4. Border’s variant: Width 50 cm, horizontal and even, at the same height as the Performance area, additional 50 cm inclination border, slope may not exceed 25%.
   1.5. Safety zone: The safety zone shall be kept totally free as a surrounding zone around the performance area and the border. It shall be horizontal, even and without gaps.

2. Measurements
   2.1. Performance area 1200 cm x 1200 cm Tolerance +/- 3 cm
   2.2. Diagonals of the performance area: 1697 cm +/- 5 cm
   2.3. Border 100 cm, min.
   2.4. Border as a variant
      2.4.1. Horizontal Area, Width 50 cm, min.
      2.4.2. Slope max. 25 %, Width 50 cm, min.
      2.4.3. Height of outer border at the very end 3.5 cm, max.
   2.5. When there is a delimitation strip between the Performance area and the border:
      2.5.1. Delimitation strip width 5 cm, Tolerance +/- 0.5 cm
   2.6. The delimitation strip is part of the Performance area.

3. Functional Properties of the performance area and border
   3.1. Equal elasticity on the surface as well as dampening.
   3.2. When in use it should not have any hindering motion energy
   3.3. Elasticity and dampening must be balanced in such a way that they guarantee the gymnast stability and freedom of movement. It must not restrict turns and slide movements.
   3.4. The surface cover of the Performance area must provide a balance between anti-skid and slippage. It must not cause skin burns.
   3.5. The floor must not produce disturbing sound during the execution of an exercise. It must assure a low noise level.

4. Of plain colour which choice is left to the manufacturer’s discretion. Dark colours are not allowed. For certain events the FIG may stipulate the colours. The delimitation shall have a clear contrast to the performance area.

Norms / Functional properties: Regarding tests carried out by FIG Tests Institutes – please see chapter IV

FIG Apparatus Norms Parts I - III 2019
Landing Mat

Acrobatic Gymnastics

Construction / Description of material, measurements

1. Use
   1.1. For landing a mat shall be available. The use is not compulsory.

2. Form and functional properties
   2.1. The functional properties of the landing mat must be identical to those of the landing mats MAG 11 and WAG 11.

3. Measurements
   3.1. The minimum size of the landing mat is 200 cm x 150 cm x 20 cm
2.6 AER Aerobic Gymnastics
Performance area

Aerobics Gymnastics

Construction / Description of material, measurements

1. Form
   1.1. The Performance Area shall have a square format. The surface must be horizontal, even and without gaps. Under load there shall not occur steps at the border of the plates.
   1.2. Border:
   1.3. Horizontal and even, at the same height as the performance area
   1.4. Safety zone:
      1.4.1. The safety zone shall be kept totally free as a surrounding zone around the performance area and the border. It shall be horizontal, even and without gaps.
   1.5. Delimitation strip:
      1.5.1. The competition area shall be surrounded by a black delimitation strip.
      1.5.2. The delimitation strip is part of the performance area.

2. Measurements
   2.1. Performance area: 1000 cm x 1000 cm
   2.2. Diagonals of the performance area: 1414 cm +/- 5 cm
   2.3. Width of the black delimitation strip 5 cm, Tolerance +/- 0,5 cm
   2.4. Border 100 cm
   2.5. Safety border 100 cm

3. Material
   3.1. Parquet flooring – laminate or synthetics

4. Functional properties
   4.1. Performance area and border:
      4.1.1. Equal elasticity and dampening.
      4.1.2. When in use no unrequested counter movements shall occur.
      4.1.3. Elasticity and dampening must be balanced in such a way that they guarantee the gymnast stability and freedom of movement. It must not restrict turns and slide movements.
      4.1.4. The surface cover of the Performance area must provide a balance between anti-skid and slippage. It must not cause skin burns.
      4.1.5. The floor must not produce disturbing sound during the execution of an exercise. It must assure a low noise level.

5. Colour and gloss
   5.1. Of plain colour, not shiny. The choice is left to the manufacturer’s discretion. Dark colours are not allowed.
   5.2. Gloss – measurements according to International Standards (ISO 2813; ASTM D 523; DIN 67530) with a standardized reflectometer at an angle of illumination of 85° shall show gloss values of R’85 ≤ 30 GU and may also not be shiny under competition conditions. (For detailed description of the reflectometer procedure see: Part IV AER1)
   5.3. The competition area shall be surrounded by a black delimitation strip.

Norms / Functional properties: Regarding tests carried out by FIG Tests Institutes – please see chapter IV
Aerobic Step

Aerobics Gymnastics

Construction / Description of material, measurements

1. Form
   1.1. The surface of the Step must be horizontal and not slippery. It can be covered by an anti-slip layer. To avoid injuries the Step shall not exhibit any sharp corners or edges that could be reached during regular use in a competition.

2. Measurements
   2.1. Height of the Step  150 mm +/- 10 mm
   2.2. Length of the horizontal upper part of the surface: 885 mm +/- 15 mm
   2.3. Width of the horizontal upper part of the surface: 275 mm +/- 10 mm
   2.4. Length of the Step at the base: 970 mm +/- 10 mm
   2.5. Width of the Step at the base: 370 mm +/- 10 mm
   2.6. Mass of the Step: \( \geq 5,0 \text{ kg} \)

3. Material
   3.1. Body of the Step: Plastics or other synthetic material
   3.2. Anti-slip covering: Plastics or other synthetic material
   3.3. The body and the anti-slip covering do not have to be of the same material.

4. Functional properties
   4.1. The surface of the Step must provide a sufficient slip resistance when it is used under competition conditions (with sneakers).
   4.2. The contact area between Step and floor must provide a sufficient slip resistance.
   4.3. The Step must not produce disturbing sound during the execution of an exercise. It must assure a low noise level.
   4.4. The support must not be separable from the body of step.
   4.5. The contact area between the Step and the floor must be such, that the Aerobic Floor is not damaged with scratches

Norms / Functional properties: Regarding tests carried out by FIG Tests Institutes – please see chapter IV
Aerobic Step

Dimensions:
- Length: 865 ± 10 mm
- Width: 970 ± 10 mm
- Depth: 154 ± 2 mm
- Height: 275 ± 10 mm

4. Competition area

Recommended Standards. For FIG Events the Placement of the Apparatuses and Podiums has to be approved by the FIG.
Requirements for Podiums and Anchors at MAG and WAG Competitions

Construction / Description of material, measurements

1. Measurements
   1.1. Size of the podiums: See recommended standards on the proceeding pages.
   1.2. Height: 80 to 100 cm

2. Requirements
   2.1. The podiums must be stable enough to withstand the forces which are transmitted by the installed equipment during use.
   2.2. During competition, no disturbing vibrations and movements shall occur in the podium.
   2.3. Special devices (i.e. additional, heavy supporting plates with sufficient area) should be used if the ground below the podiums is not hard enough.
   2.4. Additional columns shall be placed directly below the podium zones with high loads (i.e. below all contact parts the stands of the gymnastics apparatuses at least according to the table below).

</tbody>
</table>

2.5. Floor anchors and equipment attachments¹ on the ground shall be controlled by the local organizer of the competition before establishing the gymnastic equipment and podium. All attachments shall withstand a static force of 8000 N (+20N) in the pulling direction². This requirement must be fulfilled for both competition site and training sites.

2.6. The stairs to the podium shall not have rails. This regulation can be overruled by the FIG if necessary, for example if the railing of the stairs is part of the course at Parkour.

¹Equipment attachments are all devices which do not belong to the homologated standard parts of the apparatus (i.e. Horizontal bar, ring frame etc.)
²“pulling direction” means: The direction of the cable at a correctly mounted equipment. After the application of a static force as described for 1 min (+10s) in pulling direction, no permanent deformation shall be observed at the anchors and/or the equipment attachments.

5. Apparatus Control Forms
Prior to every FIG Event in MAG, WAG, TRA and RG an apparatus control shall be scheduled before the first contact of athletes with the equipment. The completed forms have to be reported to the TC President or if he is not at the competitions site to the FIG Event Delegate and to the President of the FIG Apparatus Commission. According to the FIG event, different forms shall be used:

**Form A: (FIG TC Delegate)**
Competitions: World Cups, Continental Games (without FIG Apparatus Manager)

Main aspects for the apparatus control with form A:
- To be performed 1-2 h prior to the first contact of the athletes with the equipment.
- To be done for training hall (every set), warming up hall and competition hall.
- Control of specifications of the FIG Apparatus Manual.
- Judgment of non-described safety relevant aspects.
- Control of all adjustable heights, lengths etc. at the apparatuses.
- Control of all security relevant parts (fixings, stability and mats displacement).
- If necessary, monitoring of apparatus relevant ad hoc decisions of the TP / TC or other FIG Authorities.

**Form(s) B: (FIG Apparatus Manager)**
Competitions: World Championships and Olympic Games (with FIG Apparatus Manager)

Main aspects for the apparatus control with forms B:

**IC** Intensive Control (FIG Apparatus manager):
- To be done for training hall (every set), warming up hall and competition hall
- To be performed 1-2 h prior to the first contact of the athletes with the equipment
- Control of accordance of equipment with the tested Specimen
- Control of all specifications of the FIG Apparatus Manual
- Judgment of non-described safety relevant aspects
- Report of the results to the Technical President
- If necessary, monitoring of apparatus relevant ad hoc decisions of the TP / TC or other FIG Authorities

**FC** Final Control (Technical Committee Member(s), FIG Apparatus Manager and President of the FIG Apparatus Commission):
- To be performed 1/2h prior to the competition or the podium training.
- Control of all adjustable heights, lengths etc. at the apparatuses.
- Control of all security relevant parts (fixings, stability and mats displacement).

**LC** Daily Light Control (FIG Apparatus Manager):
- To be performed every day in all training and warming up halls.
- Control of accordance of the equipment with the time of the extensive control.
- Control of all adjustable heights, lengths etc. at the apparatuses.
- Control of all security relevant parts (fixings, stability and mats displacement).

*Remark: Forms B are published in FIG Apparatus Norms Part IV.*

3D Sensing Technology

The technology keeps challenging, to capture the fast and complex movements.

More advanced, more accurate and in real-time. Fujitsu’s 3D sensing technology accurately analyzes and digitalizes the technique of world class gymnasts, which is very hard for the human eye to follow.

Fujitsu’s 3D laser sensor irradiates 2 million lasers per second, and generates 3D data on gymnast’s performances in real time, then AI recognizes their joint positions and analyzes the movements. Digitalization of human movement will enable us to create a new future for sports; for athletes, spectators/audience and judges. Fujitsu will continue to evolve the gymnastics world with its cutting edge technologies.

1. Each apparatus must have a valid FIG Certificate

The definition of «Apparatus» for these Apparatus Norms is: All apparatus used at FIG competitions and listed in these Apparatus Norms. Each apparatus, including all hand apparatus used in Rhythmic Gymnastics, must have its own, valid Certificate, to be used at FIG events, Olympic Games, World Games and international events.

For Olympic Games, World Championships, World Games and other multi-sports games (e.g. Commonwealth Games, Asian Games, Panam Games, University Games), the apparatus must have a valid certificate at least 1 year prior to the competitions. For all other competitions, the certificates must be valid at the latest at the moment of the invitation. Example: World Cup / World Challenge Cup: 3 months prior to the competitions.

2. Validity of the Certificate

The Certificates have a validity of two years. The expiry date is indicated on the certificate. The FIG may, at any time, prolong or shorten the validity of issued Certificates or withdraw a Certificate.

3. Rights of the Apparatus Manufacturer with a valid FIG Certificate

When receiving a FIG Certificate, the apparatus manufacturer obtains the following rights:

- The right that the respective apparatus may be used at all official events of the FIG, its Continental Unions and member federations, as well as at the Olympic Games and World Games.
- The right to use the designation and the logo «FIG Approved» together in the catalogue and other publicity material, as prescribed in the respective directives of the FIG. (see Appendix 1)
- The use of the sticker « FIG Approved » on the respective apparatus.
- The regular publication in the list of certified apparatus in the FIG Bulletin and on FIG’s website.
- One free advertisement (1 x ½ page, black and white) in the FIG Bulletin during the period of validity of each Certificate.

4. Procedure to obtain a FIG Certificate

The procedure consists of five steps:

- Declaration to be bound by the FIG’s Statutes, Rules and Regulations as well as the provisions concerning governing law and arbitration
- Declaration of safety regarding chemical additives and any other harmful material or substances
- Testing at one of the FIG recognised Testing Institutes
- Practical test
- Issuing of the Certificate by the FIG

4.1. Recognition of the FIG Statutes, Rules and Regulations

Apparatus manufacturers who wish an FIG Certificate have to confirm in writing, that they recognise and strictly follow the FIG Statutes, Rules and Regulations. For their relationship with the FIG, the Testing Institutes, FIG’s member federations, the Continental Unions and the organising committees, the apparatus manufacturer must accept to be governed by Swiss law and in case of disputes, to resolve such disputes to the exclusion of the ordinary courts by arbitration.
The following declaration must be made and signed:

“We herewith confirm unequivocally to respect and strictly follow the FIG Statutes, Technical Regulations, Code of Points, Apparatus Norms including the Code of Auto discipline, the Rules for Advertising and Publicity the Accreditation Rules, the Directives and Work plans of the competitions and all other Rules and Regulations published on FIG’s website. This commitment is valid as long as we have a valid Certificate.

All disputes arising out of or in connection with the Apparatus Norms, the testing and/or certification of our apparatus and in the relationship with the FIG, or one of their recognised Testing Institutes, Member Federations or Organising Committees shall be resolved, to the exclusion of the ordinary courts by an Arbitration Tribunal constituted in accordance with the Statutes and Regulations of the Court of Arbitration of Sport in Lausanne, Switzerland. We hereby undertake to comply with the said Statutes and Regulation, and to enforce in good faith the award to be rendered. The decision of the Arbitration Tribunal shall be final and binding on the parties.”

4.2. Declaration of safety regarding chemical additives and any other harmful material or substances

Apparatus manufacturers who wish to obtain a certificate, must confirm the following in a written declaration:

“We herewith confirm that all our products do not contain any known hazardous or harmful substances, material, and chemical additives, including phthalates in a concentration exceeding the maximum concentrations admitted by the Swiss and EU legislation for products manufactured in Switzerland or within the European Economic Area and that they are of no health risk whatsoever for the intended use.

We hereby agree to defend, indemnify and hold harmless the FIG, its representatives, employees, consultants and members from and against all claims, demands, losses, costs including judicial and extrajudicial costs arising from any legal action, damages, actions, suits or proceedings and by whomever made, bought, or prosecuted and in any manner based upon resulting from any misrepresentation or breach of this declaration by us, our representatives, employees, agents, suppliers or sub-contractors”.

4.3. Testing by a FIG recognised Testing Institute

Together with the submission of the confirmations described under 4.1 and 4.2, the test of the equipment concerned may be applied for at a test institute recognised by the FIG. A previous contact with the FIG Headquarters in Lausanne is needed for this purpose.

All costs in connection with the testing (transport and testing fee) are the responsibility of the apparatus manufacturer and have to be paid prior to the tests. (Testing fees see Appendix 4). Only after the FIG Headquarters has confirmed the completeness of the documentation and the payments is the applicant and the Test Institute granted permission to initiate all further preparations for the laboratory test (for contact details to the Test Institutes see Appendix 2)

The Testing Institute tests the apparatus following the norms and testing procedures and prepares and submits a test report on behalf of the FIG and the apparatus manufacturer. Manufacturers can raise an objection against descriptions and dimensions of their equipment in the test report within a period of 2 weeks after receiving the report.

For equipment with no existing test procedures the testing is done by the responsible Technical Committee after presentation of the confirmation according to 4.3. All costs are the responsibility of the apparatus manufacturer. The testing shall be announced to the FIG Secretary General.
4.4. Practical Test

After a successful laboratory test, the apparatus needs to be tested practically by gymnasts and coaches in order to get a FIG certificate. For this purpose, the FIG headquarters assigns one or several FIG's member federations, which will test the apparatus in a training centre by elite gymnasts. The apparatus must be tested under competition conditions. The manufacturer must provide a confirmation signed by the President or Secretary General of the respective member federation(s) containing the following:

“We confirm to have tested apparatus X under competition conditions at our training centre and/or at competitions. The apparatus is of the best quality, safe and suitable to be used at international competitions. We recommend that the FIG initiates the necessary procedures that this apparatus may be used at future international events.”

4.5. Issuing of FIG Certificates

The FIG Certificate will be issued by the Secretary General, provided the following conditions are met:

- Confirmation / declaration from the manufacturer to recognise the FIG Statutes, Rules and Regulations and confirmation concerning applicable law and arbitration (see 4.1)
- Declaration of safety regarding chemical additives and any other harmful material or substances (see 4.2)
- The confirmation/recommendation from a member federation concerning the practical test. (see 4.3).
- A positive test report from one of the FIG recognised Testing Institutes.
- Payment of the test fee and the Certificate fee.

5. Testing fees of the FIG recognised Testing Institutes

The testing fees must be approved by the FIG and must be identical at all FIG recognised Testing Institutes. The testing fees valid at this time are published in Appendix 4. The Testing Institutes invoice the Apparatus Manufacturer directly with the testing fees and taxes and must be prepaid.

6. Fee for the Certificate

The fee to be paid to the FIG to obtain a Certificate and the attached rights are listed in Part III, § 18 and § 3. This fee is decided by the Executive Committee and may be adjusted every two years if necessary. This fee must be paid by the Apparatus Manufacturers in advance to the FIG.

7. Obtaining a certificate without testing for apparatus produced by another manufacturer

Apparatus manufacturers and retailers may obtain an FIG certificate in their name to sell apparatus produced by another manufacturer according to the following conditions:

- Written approval from the apparatus manufacturer who has produced and tested his apparatus and has a valid certificate.
- Payment of the fee to the FIG for the requested certificate as per Art. 18 of Part III of the FIG Apparatus Norms
- The validity of the certificate cannot exceed the expiry of the original certificate of the manufacturer who has tested the apparatus
- The manufacturer who produces the apparatus may withdraw his approval at any time with written notification to FIG
• The certificate cannot be extended without approval from the manufacturer who produces the apparatus.

The description of the apparatus on the certificate must contain the name of the apparatus and an article number which is identical to the one listed in the catalogue. It must also bear the name of the manufacturer as well as the article number and name of the respective apparatus.

8. FIG Diploma

Manufacturers, who are in possession of 12 or more valid Certificates, receive a FIG Diploma free of charge. The Diploma is valid as long as the manufacturer has 12 or more valid Certificates.

The FIG Diploma gives the apparatus manufacturer the following additional rights:

• The right to have two VIP accreditations to the official FIG Competitions
• The right to attend the FIG Congress, Council, Gala and Symposium
• The right to be represented directly or indirectly to Apparatus Commission at the discretion of the FIG President (see art. 15.2 and 23 of FIG Statutes)
• The right to bear the designation «Official FIG Partner» and to use this on his letter head and promotional material.
• The right, to use the FIG Logo on his letter head and catalogue. The directives (Appendix 1) must be followed.
• A free advertisement (1 x 1/1 page, in colour) in World of Gymnastics every second year.
• A free advertisement in the FIG Bulletin (1 x 1/1 page, black and white) every second year.
• To be mentioned in the list of the Official FIG Partners and official Sponsors, this is published in every Bulletin, in the Directory and on the FIG website.
• The publication of the manufacturer’s logo in a composite page together with the official FIG sponsors in every issue of World of Gymnastics.
• A free advertisement (1/1 page, black and white) in the respective Code of Points.

9. Reward for the suppliers of World Championships and World Cup Finals

Apparatus manufacturers who have supplied the apparatus for the World Championships alone or with a maximum of one other manufacturer may request a confirmation from the FIG as «Official Supplier of the «World Championships XXX»). This confirmation may be used for publicity purposes, following the respective Directives of the FIG, (see Appendix .1)

10. Renewal of Certificates

After the first period of validity (2 years) a Certificate may be prolonged maximum twice for another period of two years by paying the fee without testing, provided the norms and/or testing procedures for the respective apparatus have not changed in the meantime and that the apparatus has not lead to any complaints during the validity of the Certificate.

If the construction of the apparatus or the functional properties have changed, the apparatus has to undergo a practical test (see 4.1) as well as by a Testing Institute (see 4.2).

In case of small modifications which do not affect the functional properties or would not lead to a different test results, the FIG may dispense the apparatus manufacturer from testing. In cases of doubt, the Secretary General takes a final decision in consultation with the FIG Test Institute and the President of the Apparatus Commission.

To renew a certificate the apparatus manufacturer must send a request to the FIG – secretariat. This request must include the following three statements:

“**We confirm that the construction of the apparatus and the functional properties have not changed since the last successful test!**”

“**We confirm that the materials used are the same and have the same functional properties as those used for the last successful test!**”

“**We confirm that our apparatus has been adapted to the apparatus norms valid today!**”
The FIG may require a re-test or refuse the prolongation.

11. New Apparatus, Modified Apparatus, New Developments

Those are defined as follows:

- New apparatus which are not included in the Apparatus Norms
- Apparatus which are listed in the Apparatus Norms, but which have been significantly modified in their form, functional properties or development

Before the manufacturer constructs a prototype, the FIG recommends that the President of the Apparatus Commission and/or the respective TC President be contacted to find out if such a new apparatus is desired.

If this is confirmed, a prototype can be constructed and presented to the FIG.

Upon recommendation of the respective TC and the Apparatus Commission, the Executive Committee may decide on a general practical test. For such a test, the EC invites manufacturers to produce prototypes and to have those tested at the same time in 4-5 training centres chosen by the FIG. The costs are the responsibility of the apparatus manufacturers interested in the project. After analyses of the test results the Apparatus Commission - in cooperation with the respective TC and the other FIG Commissions - makes the necessary proposals to the EC for the further procedure regarding the possible introduction of the new apparatus.

12. Publication of the FIG Certificates and Diplomas

The FIG regularly publishes a list of the valid Certificates and Diplomas including the period of validity.

13. FIG Sticker «FIG APPROVED»

Apparatus manufacturers who are in possession of a valid FIG Certificate have the right to stick or print the «FIG Approved» sticker on the respective apparatus. The sticker can be received from the FIG free of charge. «FIG Approved» is also available by electronic support. For colours and size see Appendix 1.

Upon written approval by the FIG Secretary General, the Sticker “FIG-Approved” can also be used for apparatuses which have no certificate and where no test is required i.e. supplementary mats, spotter mats, measuring table for RG-Apparatus etc. The written approval of the Secretary General also allows the manufacturer to use the term “FIG-Approved” for the publicity and offers of the above-mentioned kind of apparatuses.

Each written approval issued by the Secretary General is valid for two years and costs 25% of the current fees for FIG Certificates as per point III, p. 18 of these regulations per apparatus. These written approvals cannot be considered as a “certificate” in the spirit of these rules. It is not possible to issue such an approval for manufacturers who have no valid certificate.

14. Control of Apparatus at the competitions

Re-testing of apparatus by the FIG at the Testing Institute

At the official events of the FIG, as well as at the Olympic Games and World Games, the apparatus are officially controlled on site. This control mainly consists of checking the measurements, making sure that the apparatus used at the competition is identical to the tested one, as well as a control of the layout, safety zones and matting. The apparatus manufacturer is responsible that those delivered apparatus are 100% identical to the one tested in respect of the material used as well as the construction. The apparatus manufacturers are fully responsible that the norms are strictly respected; the correct setting up of the apparatus is the responsibility of the organising committee.

The FIG has and reserves the right to re-test apparatus before, during and after an event at the nearest recognised Testing Institute. In case the testing report is positive, all costs are at the charge of the FIG. In case the report is negative, the costs are at the charge of the apparatus manufacturer. Furthermore, the validity of the Certificate is immediately withdrawn. The
Disciplinary Commission decides about the duration of a ban against the respective manufacturer. Afterwards, the manufacturer may apply Certificate to be issued by the FIG (following 4.4).

15. FIG recognised Testing Institutes

The following Testing Institutes are recognised by the FIG at this time:
• GymLab (GER)
• Tokyo Institute of Technology (JPN)

For addresses, contact person, delivery addresses etc. see Appendix 1
All Testing Institutes charge the same testing fee. (See Appendix 4)
The testing fees must be approved by the FIG.
The Testing Institutes are absolutely neutral and must strictly follow the FIG testing procedures.
Testing equipment and conditions must be equal at all Testing Institutes.
It is the goal that all Testing Institutes are able to test all apparatus.
Appendix 3 lists which institute can test which apparatus.
Part IV of the Apparatus Norms also gives the necessary information about how many apparatus, m² or m of the respective apparatus must be supplied for testing purposes.

16. Publicity and apparatus manufacturer’s logo on the apparatus

See FIG Rules for Advertising and Publicity.

17. Waiver of Liability

With these Apparatus Norms, the FIG and its member federations, as well as the Testing Institutes are in no way responsible for the apparatus. The FIG, its member federations and the Testing Institutes waive all liability in connection with the use of apparatus described in these Apparatus Norms.

18. Current Fees for FIG Certificates

The following fees for Certificates are applied:
The fee to be paid to issue a Certificate for the first time or to renew a Certificate depends on the number of valid Certificates a manufacturer already has

<table>
<thead>
<tr>
<th>Number of Certificates held</th>
<th>Fee in EURO per Certificate</th>

</table>

19. Code of Auto discipline

A “Code of Auto discipline” has been elaborated by the Apparatus Commission and approved by the FIG Executive Committee in order to determine the rules, concerning the manufactures relations with the FIG and between themselves.

The rules envisaged in the Auto discipline Code are applied automatically to each infraction of the Apparatus Norms in force.

See Appendix 5
DIRECTIVES / REGULATIONS FOR THE USE OF OFFICIAL FIG DESIGNATIONS AND LOGOS

1. General Principles

1.1. The designations and logotypes/logos which are presented in this document are property of the Fédération Internationale de Gymnastique (FIG). Their use requires the FIG’s authorization. Any illegal use or non-conformity with these directives will be prosecuted and results in the withdrawal of the certificate or diploma.

1.2. The acquisition conditions for these designations which are reserved for the FIG partners are included in the brochure "Apparatus Norms" published by the FIG.

1.3. The use of these designations and logotypes/logos which are reserved for the FIG partners is prescribed in this appendix.

1.4. The general graphic prescriptions are defined in the FIG Graphics Chart.

1.5. The graphic prescriptions reserved for the use of the FIG apparatus manufacturers are included in this appendix.

1.6. The use of any designation or logotype/logos other than those mentioned in this appendix is strictly prohibited.

1.7. Any other reference to “FIG”, use of the abbreviation “FIG” (or “Fédération Internationale de Gymnastique” in any language) as well as wordings such as “following FIG Norms”, “in the process to be tested” etc. are strictly prohibited.

2. Definitions
These directives regulate the different rights of the three apparatus manufacturer categories as follows:

2.1. Holder of the "FIG-Certificate"

2.2. Holder of the "FIG-Diploma"

2.3. Holder of an FIG confirmation as "Official Supplier of the World Championships"
VTB – OFFICIAL FIG PARTNER
3. Holder of the FIG-Certificate
The holder of the “FIG Certificate” may use the logotype “FIG Approved” respecting the following conditions:

3.1. The logotype may only and exclusively be associated with only one element respectively one single article, apparatus or accessory duly certified by the FIG.

3.2. It may be used on an article respectively an apparatus or an accessory itself or it may be integrated in any type of advertising or publicity but only in direct connection or relation with the respective certified apparatus. The logotype may also appear in a description of the certified apparatus (advertisement, publicity leaflet etc.)

3.3. It may not be used as an isolated element, separate from the apparatus.

3.4. Consequently, it may not appear on letter heads, cover pages of catalogues, or in editorial articles with advertising purposes, nor in any other institutional documents containing general information.

3.5. Graphics

3.5.1. Logotype FIG Approved: (respect the size as per 3.6.1)

3.5.2. Colours

According to the range defined by the FIG Graphics Chart.
- Black
- Blue Pantone 3005 U
- Red Warm red CV

3.6. Use and size / Maximum dimensions

3.6.1. On printed matters

<table>
<thead>
<tr>
<th>Formats</th>
<th>Width x Height</th>
<th>Max. Diameter</th>
</tr>
</thead>
<tbody>
<tr>
<td>A5</td>
<td>14.8 x 21.0 cm</td>
<td>ø 08 mm max.</td>
</tr>
<tr>
<td>A4</td>
<td>21.0 x 29.7 cm</td>
<td>ø 12 mm max.</td>
</tr>
<tr>
<td>A3</td>
<td>29.7 x 42.0 cm</td>
<td>ø 18 mm max.</td>
</tr>
<tr>
<td>A2</td>
<td>42.0 x 59.4 cm</td>
<td>ø 35 mm max.</td>
</tr>
<tr>
<td>A1</td>
<td>59.4 x 84.1 cm</td>
<td>ø 60 mm max.</td>
</tr>
</tbody>
</table>
3.6.2. On the apparatus

The logotype "FIG Approved" may only be applied to the support surfaces (supports, legs of apparatus) of the apparatus. Maximum diameter is 35 mm.

On the floor and on the mats the logotype may appear in one of the four corners with a maximum distance of 5 cm to the corner or on the side of the floor/mat with the exception of the surfaces which are reserved for advertising purposes as defined in the "FIG Rules for Advertising and Publicity". Maximum diameter is 35 mm.

On the apparatus for rhythmic gymnastics the logotype/sticker "FIG Approved" is described in RG 2, 3, 4, 5, 6 and 7 pages 70/71 in chapter II of the FIG Apparatus Norms.

4. Holder of the FIG Diploma

4.1. The right to use the designation "Official FIG Partner" subject to article 1.5 of the "FIG Rules for Advertising and Publicity".

4.2. The right to use the FIG Logo for advertising purposes only, strictly respecting the FIG Graphics Chart.

In addition to the rights listed in chapter 3, the holder of a FIG Diploma obtains:

**FIG Logo:**

4.3. The title "Official FIG Partner" and the FIG logotype may by no means be used directly attached to or with a product but only with the company name or identity of the holder of the FIG Diploma. (e.g.: letter heads, envelopes, cover pages of catalogues, various kinds of printed material, newsletters, "give aways" etc.)
5. **Holder of an FIG confirmation as "Official Supplier for the World Championships"**

5.1. The apparatus manufacturer who has been duly confirmed by the FIG may use the designation

"Official Supplier of the World Championships X"

5.2. The use of the above-mentioned designation (for advertising purposes only) can only be associated with the supplied apparatus and also with the company name of the manufacturer. (e.g.: letter heads, envelopes, cover pages of catalogues, various kinds of printed material, newsletters, "give aways" etc.)

5.3. The above-mentioned designation may be used together with the FIG logotype according to the regulations of the FIG Graphics Chart and within the following dimensions:

5.4. **Formats:**

<table>
<thead>
<tr>
<th>Format</th>
<th>Width</th>
<th>Height</th>
<th>Diameter max.</th>
</tr>
</thead>
<tbody>
<tr>
<td>A5</td>
<td>14.8 cm</td>
<td>21.0 cm</td>
<td>8 mm max.</td>
</tr>
<tr>

<td>29.7 cm</td>
<td>12 mm max.</td>
</tr>
<tr>
<td>A3</td>
<td>29.7 cm</td>
<td>42.0 cm</td>
<td>18 mm max.</td>
</tr>
<tr>
<td>A2</td>
<td>42.0 cm</td>
<td>59.4 cm</td>
<td>35 mm max.</td>
</tr>
<tr>
<td>A1</td>
<td>59.4 cm</td>
<td>84.1 cm</td>
<td>60 mm max.</td>
</tr>
</tbody>
</table>

**Recommendation**

We strongly recommend that the holder of a certificate or a diploma should send his drafts of all printed matters to the FIG to be proof-read prior to printing.

  principle similar cases listed above

In addition to all the fines and sanctions listed above, the FIG reserves the right to take additional
action as deemed necessary.

V. Procedure in case of Infractions and Sanctions

Infractions may be observed by all concerned (Apparatus Manufacturers, FIG Officials and third
parties). Such observations must be given in writing to the FIG Secretary General.

The Secretary General will then take the necessary actions.

Written warnings are treated and decided by the Secretary General.

Immediate actions and decisions for infractions committed during FIG events are taken by the
Secretary General and in his absence by his representative or the President of the Superior Jury. If
he deems necessary, he will then forward the case to the FIG Disciplinary Commission for further
action.

The Secretary General will report all warnings to the Apparatus Commission.

Offences with fines are treated by the FIG Disciplinary Commission.

The FIG Secretary General will keep a list of all offences warnings and sanctions.
This list will include the date of the offence.
The 1st offences will be considered as deleted after the following time period:
• Written warnings and offences with up to and including Euro 1,000.-
  after 1 Olympic Cycle.
• Offences with fines up to and including Euro 5,000.- after 2 Olympic cycles
• Offences with fines over Euro 5,000.- after 3 Olympic cycles

All fines will be credited to the FIG Development Fund.
VI. Appeal against Sanctions

- Warnings decided by the FIG Secretary General:

  The Apparatus Manufacturers may make an appeal against decisions of the Secretary General to the FIG Disciplinary Commission.

  No further appeal is possible. The decision of the FIG Disciplinary Commission is final.

- Decisions taken by the FIG Secretary General for concerning infractions during an FIG event:

  The Apparatus Manufacturers may make an appeal against decisions and actions taken by of the Secretary General to the Jury of Appeal of the respective competition.

  No further appeal is possible. The decision of the Jury of Appeal is final.

- Sanctions decided by the FIG Disciplinary Commission

  The Apparatus Manufacturers may make an appeal against the decision taken by the FIG Disciplinary Commission as follows:

    instance of appeal: FIG Appeal Tribunal

    Appeals must be made in writing within 21 days and sent to the President of the instance concerned with a copy to the FIG Secretary General.

    Depending on the outcome of the appeal, the Disciplinary Commission and the Appeal Tribunal will decide who has to bear the costs.

    The procedures and costs for appeals to the Disciplinary Commission and the FIG Appeal Tribunal are ruled in the FIG Code of Discipline.

VII. Rules for the distribution of the Letter of Recognition

- FIG Letter of Recognition to be given to the official manufactures for the excellence of their work.
- A special FIG diploma will be given to the official supplier of 3 World Championships in 2 Olympic cycles.
- A special recognition FIG plate is to be attributed for service rendered to the development of gymnastics in the capacity of FIG partner and for the good relations with the other manufactures.
